Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

## Remarks:

Clay layer may not be absorbing groundwater. Area likely well irrigated or receives lots of tail water.

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 6/6/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 7 Sampling Point: 15-W-201206061451  
 Investigators: Trent Toler Mike Perkins Section, Township, Range S 31 T 4 R 1  
 Landform (hillslope, terrace, etc.): Flat Local Relief (concave, convex, none): None Slope(%) 1  
 Subregion (LRR): LRR D Lat: 41.0438764803 Long: -112.004463956 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Warm Springs fine sandy loam, 0 to 1 percent slopes NWI Classification: PEMF  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No        (If No, explain in Remarks)  
 Are Vegetation       , Soil       , Hydrology       , significantly disturbed? Are "Normal Circumstances" present? Yes        No X  
 Are Vegetation       , Soil       , Hydrology       , naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>      </u>	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No <u>      </u> <b>Wetland ID:</b> <u>15-W-13</u>
Hydric Soil Present? Yes <u>X</u> No <u>      </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>      </u>	

Remarks:  
 Very slight gradient from upland to wetland. Much wetter looking, just down slope.

## VEGETATION— Use scientific names of plants.

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

18 to 20	10YR	3.0/ 2	70	10YR 7/2	30	C	M	SANDY CLAY LOAM	

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Martix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5) LRR C
- ☐ 1 cm Muck (A9) LRR F D
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)

☐ Sandy Redox (S5)☐ Stripped Matrix (S6)☐ Loamy Mucky Mineral (F1)☐ Loamy Gleyed Matrix (F2)☐ Depleted Matrix (F3)☐ Redox Dark Surface (F6)☐ Depleted Dark Surface (F7)☐ Redox Depressions (F8)☐ Vernal Pools (F9)

Indicators for Problematic Hydric Soils: <sup>3</sup>

- ☐ 1 cm Muck (A9) (LRR C)
- ☐ 2 cm Muck (A10) (LRR B)
- ☐ Reduced Vertic (F18)
- ☐ Red Parent Material (TF2)
- ☐ Other (Explain in Remarks)

<sup>3</sup> Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

☐ Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No X

Remarks:  
Soils do not meet hydric criteria.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (Nonriverine)
- ☐ Sediment Deposits (B2) (Nonriverine)
- ☐ Drift Deposits (B3) (Nonriverine)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☒ Water-Stained Leaves (B9)
- ☐ Salt Crust (B11)
- ☒ Biotic Crust (B12)
- ☐ Aquatic Fauna (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ☐ Water Marks (B1) (Riverine)
- ☐ Sediment Deposits (B2) (Riverine)
- ☐ Drift Deposits (B3) (Riverine)
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imag.(C9)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes \_\_\_\_\_ No X Depth (inches): \_\_\_\_\_  
Water Table Present? Yes X No \_\_\_\_\_ Depth (inches): 20  
Saturation Present? Yes X No \_\_\_\_\_ Depth (inches): 16  
(includes capillary fringe)

Wetland Hydrology Present? Yes X No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:  
Sampling point meets criteria for wetland hydrology.

Arid West – Version 2.0

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 6/8/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 6 Sampling Point: 15-N-201206081048  
 Investigators: Donovan Gross Section, Township, Range S 26 T 4 R 2  
 Landform (hillslope, terrace, etc.): Basin Local Relief (concave, convex, none): None Slope(%) 3  
 Subregion (LRR): LRR D Lat: 41.0530299175 Long: -112.027765984 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes _____ No <u>X</u>	

Remarks:  
 Sampling point not a wetland.

## VEGETATION— Use scientific names of plants.

**Absolute % Cover** **Dominant Species** **Indicator Status**

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

Hordeum jubatum	30	Y	FAC
Festuca pratensis	15	Y	FACU
Carex nebrascensis	10	N	OBL
Eleocharis palustris	5	N	OBL
	60	=Total Cover	

### Vine Stratum

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across all Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 50.0% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>15</u>	x 1 = <u>15</u>
FACW species <u>0</u>	x 2 = <u>0</u>
FAC species <u>30</u>	x 3 = <u>90</u>
FACU species <u>15</u>	x 4 = <u>60</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>60</u> (A)	<u>165</u> (B)

Prevalence Index = B/A = 2.75

### Hydrophytic Vegetation Indicators:

☐ Rapid Test for Hydrophytic Vegetation  
☐ Dominance Test > 50%  
☒ Prevalence Index ≤ 3.0  
☐ Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
☐ Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes X No \_\_\_\_\_

% Bare Ground in Herb Stratum 10 % Cover of Biotic Crust \_\_\_\_\_

Remarks: (Include photo numbers here or on a separate sheet.)  
 Vegetation qualifies as hydrophytic by the Prevalence Index.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix		Redox Features				Texture	Remarks

 Soil Map Unit Name: Ford loam, 0 to 1 percent slopes NWI Classification: PEMA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No        (If No, explain in Remarks)  
 Are Vegetation       , Soil       , Hydrology       , significantly disturbed? Are "Normal Circumstances" present? Yes        No X  
 Are Vegetation       , Soil X, Hydrology       , naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>      </u>	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No <u>      </u> Wetland ID: <u>15-CW-10</u>
Hydric Soil Present? Yes <u>X</u> No <u>      </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>      </u>	

Remarks:  
 Wetland point with saline/alkaline soils.

## VEGETATION— Use scientific names of plants.

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
<u>Tree Stratum</u>			
<u>Shrub Stratum</u>			
<u>Herb Stratum</u> (Plot size: <u>30 Ft</u> )			
Juncus arcticus	20	Y	FACW
Puccinellia nuttalliana	20	Y	FACW
Schoenoplectus pungens	20	Y	OBL
Hordeum jubatum	15	N	FAC
Phragmites australis	5	N	FACW
Tamarix ramosissima	1	N	FACW
	81	=Total Cover	

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 3 (A)  
 Total Number of Dominant Species Across all Strata: 3 (B)  
 Percent of Dominant Species That are OBL, FACW, or FAC: 100.0% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>20</u>	x 1 = <u>20</u>
FACW species <u>46</u>	x 2 = <u>92</u>
FAC species <u>15</u>	x 3 = <u>45</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>81</u> (A)	<u>157</u> (B)
Prevalence Index = B/A= <u>1.94</u>	

### Hydrophytic Vegetation Indicators:

Rapid Test for Hydrophytic Vegetation  
X Dominance Test > 50%  
X Prevalence Index ≤ 3.0  
 Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
 Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes X No       

% Bare Ground in Herb Stratum 5 % Cover of Biotic Crust 20

Remarks: (Include photo numbers here or on a separate sheet.)  
 Vegetation is hydrophytic.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of Indicators.)**

6-10	10YR 4/2	60%					ClLoam	
	10YR 3/1	40%						
10-12	10YR 4/3	80%					ClLoam	
	10YR 3/1	20%						

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

### Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5) (**LRR C**)
- ☐ 1 cm Muck (A9) (**LRR D**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)

- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Vernal Pools (F9)

### Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 1 cm Muck (A9) (**LRR C**)
- ☐ 2 cm Muck (A10) (**LRR B**)
- ☐ Reduced Vertic (F18)
- ☐ Red Parent Material (TF2)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

### Restrictive Layer (if present):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No hydric indicators observed in soil profile.

## HYDROLOGY

### Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (**Nonriverine**)
- ☐ Sediment Deposits (B2) (**Nonriverine**)
- ☐ Drift Deposits (B3) (**Nonriverine**)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☒ Water-Stained Leaves (B9)

- ☐ Salt Crust (B11)
- ☐ Biotic Crust (B12)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water Marks (B1) (**Riverine**)
- ☐ Sediment Deposits (B2) (**Riverine**)
- ☐ Drift Deposits (B3) (**Riverine**)
- ☒ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Shallow Aquitard (D3)
- ☐ FAC-Neutral Test (D5)

### Field Observations:

Surface Water Present? Yes \_\_\_\_\_ No \_\_\_\_\_ Depth (inches): \_\_\_\_\_

Water Table Present? Yes \_\_\_\_\_ No \_\_\_\_\_ Depth (inches): \_\_\_\_\_

Saturation Present? Yes \_\_\_\_\_ No \_\_\_\_\_ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

Wetland Hydrology Present? Yes ☒ No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Hydrology indicator (B9) observed.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

### Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5) (**LRR C**)
- ☐ 1 cm Muck (A9) (**LRR D**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)

- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Vernal Pools (F9)

### Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 1 cm Muck (A9) (**LRR C**)
- ☐ 2 cm Muck (A10) (**LRR B**)
- ☐ Reduced Vertic (F18)
- ☐ Red Parent Material (TF2)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

### Restrictive Layer (if present):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

Layer 3-7: 10YR 4/6 occurs in band around 7".

## HYDROLOGY

### Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (**Nonriverine**)
- ☐ Sediment Deposits (B2) (**Nonriverine**)
- ☐ Drift Deposits (B3) (**Nonriverine**)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)

- ☐ Salt Crust (B11)
- ☐ Biotic Crust (B12)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water Marks (B1) (**Riverine**)
- ☐ Sediment Deposits (B2) (**Riverine**)
- ☐ Drift Deposits (B3) (**Riverine**)
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-Neutral Test (D5)

### Field Observations:

Surface Water Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_

Water Table Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_

Saturation Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

Wetland Hydrology Present? Yes \_\_\_\_\_ No ☒

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Dry season.

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

**Hydric Soil Present?** Yes \_\_\_\_\_ No ☒

Remarks:

Problematic soil (likely high pH). Close to A11 but horizon isn't thick enough.

# HYDROLOGY

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (**Nonriverine**)
- ☐ Sediment Deposits (B2) (**Nonriverine**)
- ☐ Drift Deposits (B3) (**Nonriverine**)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)

- ☐ Salt Crust (B11)
- ☐ Biotic Crust (B12)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☒ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water Marks (B1) (**Riverine**)
- ☐ Sediment Deposits (B2) (**Riverine**)
- ☐ Drift Deposits (B3) (**Riverine**)
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_

Water Table Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_

Saturation Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

**Wetland Hydrology Present?** Yes ☒ No \_\_\_\_\_

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 8/9/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 4 Sampling Point: 12-N-201208091019  
 Investigators: Mike Perkins Nate Nichols Section, Township, Range S 22 T 4 R 2  
 Landform (hillslope, terrace, etc.): Basin Local Relief (concave, convex, none): Concave Slope(%) 5  
 Subregion (LRR): LRR D Lat: 41.0667665146 Long: -112.061050724 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No X  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology X, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes <u>X</u> No _____	

Remarks:  
 Sampling point not a wetland. \*Revisited 4/25/13 with NO hydrology noted, Sat @ 17". Above noted soil cracks noted during dry season, may be unrelated to present hydrology.\*

## VEGETATION— Use scientific names of plants.

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
<u>Suaeda occidentalis</u>	<u>30</u>	<u>Y</u>	<u>FACW</u>

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

## Remarks:

Adjacent to leaking groundwater well.

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 5/7/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 5 Sampling Point: 14-W-201209211105  
 Investigators: Trent Toler Section, Township, Range S 22 T 4 R 2  
 Landform (hillslope, terrace, etc.): Flat Local Relief (concave, convex, none): None Slope(%) 0  
 Subregion (LRR): LRR D Lat: 41.0643038314 Long: -112.04903838 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, shallow water table, 0 to 1 percent slopes NWI Classification: PEMF  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No        (If No, explain in Remarks)  
 Are Vegetation       , Soil       , Hydrology       , significantly disturbed? Are "Normal Circumstances" present? Yes X No         
 Are Vegetation       , Soil       , Hydrology       , naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>      </u>	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No <u>      </u> <b>Wetland ID:</b> <u>14-W-66</u>
Hydric Soil Present? Yes <u>X</u> No <u>      </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>      </u>	

Remarks:  
 Mixed wetland pasture with recent fill along west edge, and a paved trail and vegetation-filled ditch along north edge. Potential irrigation confoundment given the patchy condition of the wetland vegetation.

## VEGETATION— Use scientific names of plants.

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
<u>Tree Stratum</u>			
<u>Shrub Stratum</u>			
<u>Herb Stratum</u> (Plot size: <u>30 Ft</u> )			
Phragmites australis	30	Y	FACW
Ambrosia artemisiifolia	25	Y	FACU
Hordeum jubatum	25	Y	FAC
Schoenoplectus pungens	15	N	OBL
Muhlenbergia asperifolia	5	N	FACW
Thinopyrum ponticum	3	N	UPL
	103	=Total Cover	

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 2 (A)  
 Total Number of Dominant Species Across all Strata: 3 (B)  
 Percent of Dominant Species That are OBL, FACW, or FAC: 66.7% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>15</u>	x 1 = <u>15</u>
FACW species <u>35</u>	x 2 = <u>70</u>
FAC species <u>25</u>	x 3 = <u>75</u>

# WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: WDC MPMNAC-08302016-1-IN City/County: Davis County Sampling Date: 8/30/2016  
 Applicant/Owner: UDOT State: Utah Sampling Point: MPMNAC-083  
 Investigator(s): MP/MN/AC Section, Township, Range: 27 4N 2W  
 Landform (hillslope, terrace, etc.): terrace/depression Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR): D Lat: 41.05982423 Long: -112.0620161 Datum: D WGS 1983  
 Soil Map Unit Name: Airport silt loam, 0 to 2 percent slopes NWI classification: PEM1/USA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)  
 Are Vegetation ☐, Soil ☐, or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐  
 Are Vegetation ☐, Soil ☐, or Hydrology ☐ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
Wetland Hydrology Present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>		
Remarks:  Problematic soils (high pH) assumed hydric in saline wetland based on vegetation community and landscape position. Seasonal hydrology assumed earlier in the growing season.			

## VEGETATION – Use scientific names of plants.

 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____ No <u>X</u>	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present?	Yes _____ No <u>X</u>	
Wetland Hydrology Present?	Yes _____ No <u>X</u>	

Remarks:  
 Non-wetland sampling point does not contain hydrophytic vegetation. Sampling point is just east of wetland point and used to help delineate wetland boundary.

## VEGETATION— Use scientific names of plants.

**Absolute % Cover** **Dominant Species** **Indicator Status**

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

Festuca pratensis	80	Y	FACU
Thinopyrum intermedium	10	N	UPL
Trifolium fragiferum	10	N	FACU
	100	=Total Cover	

### Vine Stratum

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across all Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 0.0% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>0</u>	x 2 = <u>0</u>

# WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: WDC ACJW-08222016-1-IN-2 City/County: Davis County Sampling Date: 8/25/2016  
 Applicant/Owner: UDOT State: Utah Sampling Point: ACJW-08222016  
 Investigator(s): JW/AC Section, Township, Range: 21 4N 2W  
 Landform (hillslope, terrace, etc.): terrace/depression Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR): D Lat: 41.05778864 Long: -112.069247 Datum: D WGS 1983  
 Soil Map Unit Name: Pintailake-Eimarsh-Playas complex, 0 to 1 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil ☒, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present? Yes <input checked="" type="checkbox"/> No _____	
Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No _____	
Remarks: Saline meadow directly adjacent to emergent marsh. Problematic soils (high pH) assumed hydric in saline wetland based on vegetation community, hydrology indication, and landscape position.	

## VEGETATION – Use scientific names of plants.

<b>Tree Stratum</b> (Plot size: _____) 1. _____ 2. _____ 3. _____ 4. _____ _____ = Total Cover <b>Sapling/Shrub Stratum</b> (Plot size: _____) 1. _____ 2. _____ 3. _____ 4. _____ 5. _____ _____ = Total Cover <b>Herb Stratum</b> (Plot size: <u>5 ft. radius</u> ) 1. <u>Distichlis spicata</u> 95% Yes FAC 2. <u>Cordylanthus maritimus</u> 2% OBL 3. <u>Puccinellia nuttalliana</u> 2% FACW 4. <u>Agrostis exarata</u> 1% FACW 5. _____ 6. _____ 7. _____ 8. _____ _____ = Total Cover <b>Woody Vine Stratum</b> (Plot size: _____) 1. _____ 2. _____ _____ = Total Cover % Bare Ground in Herb Stratum _____ % Cover of Biotic Crust _____	<b>Dominance Test worksheet:</b> Number of Dominant Species That Are OBL, FACW, or FAC: <u>1</u> (A) Total Number of Dominant Species Across All Strata: <u>1</u> (B) Percent of Dominant Species That Are OBL, FACW, or FAC: <u>100%</u> (A/B) <b>Prevalence Index worksheet:</b> Total % Cover of: _____ Multiply by: _____ OBL species _____ x 1 = _____ FACW species _____ x 2 = _____ FAC species _____ x 3 = _____ FACU species _____ x 4 = _____ UPL species _____ x 5 = _____ Column Totals: _____ (A) _____ (B) Prevalence Index = B/A = _____ <b>Hydrophytic Vegetation Indicators:</b> <input checked="" type="checkbox"/> Dominance Test is >50% <input type="checkbox"/> Prevalence Index is ≤3.0 <sup>1</sup> <input type="checkbox"/> Morphological Adaptations <sup>1</sup> (Provide supporting data in Remarks or on a separate sheet) <input type="checkbox"/> Problematic Hydrophytic Vegetation <sup>1</sup> (Explain) <sup>1</sup> Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic. <b>Hydrophytic Vegetation Present?</b> Yes <input checked="" type="checkbox"/> No _____
Remarks: Vegetation passes dominance test.	

## SOIL

Sampling Point: ACJW-082

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0-4	10YR 3/3	99%	10YR 6/3				Loam	
4-10.5	10YR 4/2	99%	5YR 4/6	1%	C	M	Loam	oxidized rhizospheres
10.5-16	7.5YR 4/3	34%						
	7.5YR 6/3	33%						
	7.5YR 3/1	33%						

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5) (**LRR C**)
- ☐ 1 cm Muck (A9) (**LRR D**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1)
- ☐ Sandy Gleyed Matrix (S4)

- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Vernal Pools (F9)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- ☐ 1 cm Muck (A9) (**LRR C**)
- ☐ 2 cm Muck (A10) (**LRR B**)
- ☐ Reduced Vertic (F18)
- ☐ Red Parent Material (TF2)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

**Hydric Soil Present?** Yes \_\_\_\_\_ No ☒

Remarks:

Problematic soils, likely due to alkalinity.

## HYDROLOGY

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (**Nonriverine**)
- ☐ Sediment Deposits (B2) (**Nonriverine**)
- ☐ Drift Deposits (B3) (**Nonriverine**)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)

- ☐ Salt Crust (B11)
- ☐ Biotic Crust (B12)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☒ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water Marks (B1) (**Riverine**)
- ☐ Sediment Deposits (B2) (**Riverine**)
- ☐ Drift Deposits (B3) (**Riverine**)
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_

Water Table Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_

Saturation Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

**Wetland Hydrology Present?** Yes ☒ No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

No hydrology indicators observed.

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- ☐ 1 cm Muck (A9) (**LRR C**)
- ☐ 2 cm Muck (A10) (**LRR B**)
- ☐ Reduced Vertic (F18)
- ☐ Red Parent Material (TF2)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

**Hydric Soil Present?** Yes ☒ No ☐

Remarks:

Problematic soil likely due to alkalinity. Assumed hydric based on vegetation community, hydrology indication, and landscape position.

# HYDROLOGY

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (**Nonriverine**)
- ☐ Sediment Deposits (B2) (**Nonriverine**)
- ☐ Drift Deposits (B3) (**Nonriverine**)
- ☒ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)

- ☐ Salt Crust (B11)
- ☐ Biotic Crust (B12)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water Marks (B1) (**Riverine**)
- ☐ Sediment Deposits (B2) (**Riverine**)
- ☐ Drift Deposits (B3) (**Riverine**)
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_

Water Table Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_

Saturation Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

**Wetland Hydrology Present?** Yes ☒ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Saline flat area.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

**Remarks:**

No wetland hydrology.

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 8/1/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 4 Sampling Point: 12-N-20120801129  
 Investigators: Donovan Gross Nate Nichols Section, Township, Range S 22 T 4 R 2  
 Landform (hillslope, terrace, etc.): Basin Local Relief (concave, convex, none): Concave Slope(%) 5  
 Subregion (LRR): LRR D Lat: 41.0679443662 Long: -112.063486704 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Warm Springs fine sandy loam, shallow water table, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology X, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <u>X</u>	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes _____ No <u>X</u>	

Remarks:  
 Upland vegetation. Sample point suggests area is not a wetland. No soil data collected.

## VEGETATION— Use scientific names of plants.

 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology X, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No _____ <b>Wetland ID:</b> <u>12-IW-31</u>
Hydric Soil Present? Yes <u>X</u> No _____	
Wetland Hydrology Present? Yes <u>X</u> No _____	

Remarks:  
 Sample point suggests area is a wetland. Appears to be isolated.

## VEGETATION— Use scientific names of plants.

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
Eleocharis palustris	30	Y	OBL
Hordeum jubatum	10	Y	FAC
Trifolium fragiferum	5	N	FACU
Polypogon monspeliensis	2	N	FACW
Schoenoplectus pungens	2	N	OBL

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

## Remarks:

Sampling point meets criteria for wetland hydrology.

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 8/14/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 4 Sampling Point: 12-W-201208141338  
 Investigators: Trent Toler Section, Township, Range S 22 T 4 R 2  
 Landform (hillslope, terrace, etc.): Flat Local Relief (concave, convex, none): None Slope(%) 1  
 Subregion (LRR): LRR D Lat: 41.0674953153 Long: -112.057158469 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, 0 to 1 percent slopes NWI Classification: PEMF

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No        (If No, explain in Remarks)  
 Are Vegetation       , Soil       , Hydrology       , significantly disturbed? Are "Normal Circumstances" present? Yes        No X  
 Are Vegetation       , Soil       , Hydrology X, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>      </u>	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No <u>      </u> Wetland ID: <u>12-IW-25</u>
Hydric Soil Present? Yes <u>X</u> No <u>      </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>      </u>	

Remarks:  
 Wet spot in pasture where water collects and drains South out of field. However, no defined channel or OHWM.

## VEGETATION— Use scientific names of plants.

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
<u>Tree Stratum</u>			
<u>Shrub Stratum</u>			
<u>Herb Stratum</u> (Plot size: <u>30 Ft</u> )			
Juncus arcticus	95	Y	FACW
Lepidium latifolium	10	N	FAC
Distichlis spicata	3	N	FAC
	108	=Total Cover	
<u>Vine Stratum</u>			

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 1 (A)  
 Total Number of Dominant Species Across all Strata: 1 (B)  
 Percent of Dominant Species That are OBL, FACW, or FAC: 100.0% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>95</u>	x 2 = <u>190</u>
FAC species <u>13</u>	x 3 = <u>39</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>108</u> (A)	<u>229</u> (B)
Prevalence Index = B/A= <u>2.12</u>	

### Hydrophytic Vegetation Indicators:

Rapid Test for Hydrophytic Vegetation  
X Dominance Test > 50%  
X Prevalence Index ≤ 3.0  
 Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
 Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes X No       

% Bare Ground in Herb Stratum 0 % Cover of Biotic Crust

Remarks: (Include photo numbers here or on a separate sheet.)

Juncus-dominated patch.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix			Redox Features				Texture	Remarks
	Color (moist)		%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0 to 3	10YR	3.0/ 3	100					CLAY LOAM	Organic root mat

 Are Vegetation       , Soil       , Hydrology       , naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>      </u>	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No <u>      </u> <b>Wetland ID:</b> <u>12-W-59</u>
Hydric Soil Present? Yes <u>X</u> No <u>      </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>      </u>	

Remarks:  
 Wetland in shallow, swale-like channel. All 3 parameters met as a wetland.

## VEGETATION— Use scientific names of plants.

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Hydrology may be related to golf course.

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 5/10/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 1 Sampling Point: 08-W-201205101305  
 Investigators: Mike Perkins Brian Nicholson Section, Township, Range S 9 T 4 R 2  
 Landform (hillslope, terrace, etc.): Basin Local Relief (concave, convex, none): Concave Slope(%) 2  
 Subregion (LRR): LRR D Lat: 41.0939101023 Long: -112.083367358 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, shallow water table, 0 to 1 percent slopes NWI Classification: PEMC

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No        (If No, explain in Remarks)  
 Are Vegetation X, Soil X, Hydrology       , significantly disturbed? Are "Normal Circumstances" present? Yes        No X  
 Are Vegetation       , Soil       , Hydrology       , naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>      </u>	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No <u>      </u> Wetland ID: <u>08-W-26</u>
Hydric Soil Present? Yes <u>X</u> No <u>      </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>      </u>	

Remarks:  
 Wetland sample point. Evidence of soil disturbance (lower layer of old organic material & debris in upper soil layers).

## VEGETATION— Use scientific names of plants.

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
<u>Tree Stratum</u>			
<u>Shrub Stratum</u>			
<u>Herb Stratum</u> (Plot size: <u>30 Ft</u> )			
<u>Phalaris arundinacea</u>	<u>40</u>	<u>Y</u>	<u>FACW</u>
	<u>40</u>	<u>=Total Cover</u>

**Field Observations:**

Surface Water Present?	Yes _____ No <u>X</u>	Depth (inches):	_____
Water Table Present?	Yes _____ No <u>X</u>	Depth (inches):	16
Saturation Present?	Yes <u>X</u> No _____	Depth (inches):	1

(includes capillary fringe)

**Wetland Hydrology Present?** Yes X No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

## Remarks:

Surface saturated but layers below are not so may be due to recent irrigation. While this saturation does not appear to be associated with a water table, saturation with a shallow water table was observed here in April 2012. South end still has surface water.

☐ Shallow Aquitard (D3)  
☒ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes        No X Depth (inches):         
 Water Table Present? Yes        No X Depth (inches):         
 Saturation Present? Yes        No X Depth (inches): 15  
 (includes capillary fringe)

Wetland Hydrology Present? Yes        No X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

## Remarks:

Area lacks sufficient evidence for wetland hydrology.

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 5/11/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: 2 Sampling Point: 09-N-201205111408  
 Investigators: Mike Perkins Nate Nichols Section, Township, Range S 9 T 4 R 2  
 Landform (hillslope, terrace, etc.): Basin Local Relief (concave, convex, none): Concave Slope(%) 20  
 Subregion (LRR): LRR D Lat: 41.0904859173 Long: -112.08234541 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, shallow water table, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes _____ No <u>X</u>	

Remarks:  
 Area with hydrophytic vegetation does not meet wetland criteria (soils & hydrology fail). Area appears to be influenced by irrigation as it is near the terminus of a field ditch.

## VEGETATION— Use scientific names of plants.

**Absolute % Cover** **Dominant Species** **Indicator Status**

**Indicators for Problematic Hydric Soils: <sup>3</sup>**

- ☐ 1 cm Muck (A9) (LRR C)
- ☐ 2 cm Muck (A10) (LRR B)
- ☐ Reduced Vertic (F18)
- ☐ Red Parent Material (TF2)
- ☒ Other (Explain in Remarks)

<sup>3</sup> Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

☒ **Restrictive Layer (if observed):**

Type: rock

Depth (inches): 3

**Hydric Soil Present?** Yes X No     

**Remarks:**

Rock layer at 3 inches appears imported - dark limestone unlike deeper calcic layers seen nearby. Soil fits hydric indicator F8. Not truly a depressional landform, but seems to exhibit some functionality through ponding.

**HYDROLOGY****Wetland Hydrology Indicators:**

Arid West – Version 2.0

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 5/16/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: \_\_\_\_\_ Sampling Point: 06-N-201205161013  
 Investigators: Donovan Gross Mike Perkins Section, Township, Range S 31 T 5 R 2  
 Landform (hillslope, terrace, etc.): Flat Local Relief (concave, convex, none): Convex Slope(%) 1  
 Subregion (LRR): LRR D Lat: 41.1220163138 Long: -112.106474837 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, shallow water table, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <u>X</u> Hydric Soil Present? Yes _____ No <u>X</u> Wetland Hydrology Present? Yes _____ No <u>X</u>	Is the Sampled Area within a Wetland? Yes _____ No <u>X</u> Wetland ID: _____
---	--

Remarks:  
 "Out" point in heavily grazed pasture does not contain any wetland indicators.

### VEGETATION— Use scientific names of plants.

#### Tree Stratum

#### Shrub Stratum

#### Herb Stratum (Plot size: 30 Ft )

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
<u>Festuca arundinacea</u>	<u>30</u>	<u>Y</u>	<u>FACU</u>
<u>Distichlis spicata</u>	<u>20</u>	<u>Y</u>	<u>FAC</u>
<u>Trifolium repens</u>	<u>20</u>	<u>Y</u>	<u>FACU</u>
<u>Atriplex micrantha</u>	<u>15</u>	<u>N</u>	<u>UPL</u>
	<u>85</u>	<u>=Total Cover</u>	

#### Vine Stratum

#### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across all Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 33.3% (A/B)

#### Prevalence Index Worksheet:

Total % Cover of:		Multiply by:	
OBL species	<u>0</u>	x 1 =	<u>0</u>
FACW species	<u>0</u>	x 2 =	<u>0</u>
FAC species	<u>20</u>	x 3 =	<u>60</u>
FACU species	<u>50</u>	x 4 =	<u>200</u>
UPL species	<u>15</u>	x 5 =	<u>75</u>
Column Totals:	<u>85</u> (A)		<u>335</u> (B)

Prevalence Index = B/A= 3.94

#### Hydrophytic Vegetation Indicators:

\_\_\_\_\_ Rapid Test for Hydrophytic Vegetation  
 \_\_\_\_\_ Dominance Test > 50%  
 \_\_\_\_\_ Prevalence Index ≤ 3.0  
 \_\_\_\_\_ Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
 \_\_\_\_\_ Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes \_\_\_\_\_ No X

% Bare Ground in Herb Stratum 10 % Cover of Biotic Crust \_\_\_\_\_

Remarks: (Include photo numbers here or on a separate sheet.)

Vegetation is not hydrophytic.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>

 Landform (hillslope, terrace, etc.): Flat Local Relief (concave, convex, none): None Slope(%) 0  
 Subregion (LRR): LRR D Lat: 41.1152670743 Long: -112.103724452 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Ford loam, shallow water table, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology X, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes _____ No <u>X</u>	

Remarks:  
 Sampling point in pastureland not a wetland. Vegetation appears "drier" to the west.

## VEGETATION— Use scientific names of plants.

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

	<u>Absolute % Cover</u>	<u>Dominant Species</u>	<u>Indicator Status</u>
Juncus arcticus	45	Y	FACW
Hordeum jubatum	30	Y	FAC
Poa palustris	10	N	FAC
Thinopyrum ponticum	10	N	UPL
Atriplex micrantha	5	N	UPL
Conyza bonariensis	5	N	FACU
	105	=Total Cover	

### Vine Stratum

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across all Strata: 2 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100.0% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>45</u>	x 2 = <u>90</u>
FAC species <u>40</u>	x 3 = <u>120</u>
FACU species <u>5</u>	x 4 = <u>20</u>
UPL species <u>15</u>	x 5 = <u>75</u>
Column Totals: <u>105</u> (A)	<u>305</u> (B)

Prevalence Index = B/A = 2.90

### Hydrophytic Vegetation Indicators:

Rapid Test for Hydrophytic Vegetation  
X Dominance Test > 50%  
X Prevalence Index ≤ 3.0  
 Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
 Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes X No \_\_\_\_\_

% Bare Ground in Herb Stratum 15 % Cover of Biotic Crust

Remarks: (Include photo numbers here or on a separate sheet.)  
 Although less vigorous than vegetation in nearby wetland sampling point to the east, vegetation qualifies as hydrophytic.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix		Redox Features				Texture	Remarks

 Soil Map Unit Name: Ford loam, shallow water table, 0 to 1 percent slopes NWI Classification: PEMC  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology X, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <u>X</u> No _____ <b>Wetland ID:</b> <u>07-W-37</u>
Hydric Soil Present? Yes <u>X</u> No _____	
Wetland Hydrology Present? Yes _____ No <u>X</u>	

Remarks:  
 Sampling point in mesic pastureland determined to be a wetland with hydrophytic vegetation and hydric soils. Hydrology assumed during wetter portion of growing season. Point is near western boundary of wetland; hydrophytic vegetation within the wetland becomes more vigorous to the east and south.

## VEGETATION— Use scientific names of plants.

**Absolute % Cover** **Dominant Species** **Indicator Status**

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

Juncus arcticus	40	Y	FACW
Poa palustris	25	Y	FAC
Trifolium fragiferum	25	Y	FACU
Elymus repens	10	N	FAC
Xanthium strumarium	10	N	FAC
Carex praegracilis	5	N	FACW
Hordeum jubatum	5	N	FAC
Thinopyrum ponticum	2	N	UPL
	122	=Total Cover	

### Vine Stratum

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across all Strata: 3 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 66.7% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>45</u>	x 2 = <u>90</u>
FAC species <u>50</u>	x 3 = <u>150</u>
FACU species <u>25</u>	x 4 = <u>100</u>
UPL species <u>2</u>	x 5 = <u>10</u>
Column Totals: <u>122</u> (A)	<u>350</u> (B)

Prevalence Index = B/A = 2.87

### Hydrophytic Vegetation Indicators:

Rapid Test for Hydrophytic Vegetation  
X Dominance Test > 50%  
X Prevalence Index ≤ 3.0  
 Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
 Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes X No \_\_\_\_\_

% Bare Ground in Herb Stratum 10 % Cover of Biotic Crust

Remarks: (Include photo numbers here or on a separate sheet.)  
 Vegetation is hydrophytic; becomes more vigorous to the east and south.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)**

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>

- ☐ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes \_\_\_\_\_ No X Depth (inches): \_\_\_\_\_

Water Table Present? Yes \_\_\_\_\_ No X Depth (inches): \_\_\_\_\_

Saturation Present? Yes \_\_\_\_\_ No X Depth (inches): \_\_\_\_\_

(includes capillary fringe)

**Wetland Hydrology Present?** Yes \_\_\_\_\_ No X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

## Remarks:

No indicators observed, but problematic time of year for seasonal wetlands. Area may be influenced by irrigation; field ditch nearby (15 feet from point within wetland) has about 2 inches of surface water.

# HYDROLOGY

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1) (**Nonriverine**)
- ☐ Sediment Deposits (B2) (**Nonriverine**)
- ☐ Drift Deposits (B3) (**Nonriverine**)
- ☐ Surface Soil Cracks (B6)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Water-Stained Leaves (B9)

- ☐ Salt Crust (B11)
- ☐ Biotic Crust (B12)
- ☐ Aquatic Invertebrates (B13)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres along Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☒ Thin Muck Surface (C7)
- ☐ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ☐ Water Marks (B1) (**Riverine**)
- ☐ Sediment Deposits (B2) (**Riverine**)
- ☐ Drift Deposits (B3) (**Riverine**)
- ☐ Drainage Patterns (B10)
- ☐ Dry-Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_

Water Table Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_

Saturation Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

**Wetland Hydrology Present?** Yes ☒ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

# WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: WDC MPDGACJW-07-W-37-1-OUT City/County: Davis County Sampling Date: 7/18/2016

# WETLAND DETERMINATION DATA FORM - Arid West Region

Project Site: West Davis Corridor City/County: Davis County Sampling Date: 5/15/2012  
 Applicant/Owner: UDOT State: UT Map/Sheet: \_\_\_\_\_ Sampling Point: 05-N-201205151022  
 Investigators: Ron Kass Paul Dawson Section, Township, Range S 31 T 5 R 2  
 Landform (hillslope, terrace, etc.): Toe of Slope Local Relief (concave, convex, none): None Slope(%) 2  
 Subregion (LRR): LRR D Lat: 41.1320305276 Long: -112.107254341 Datum: GCS\_WGS\_1984  
 Soil Map Unit Name: Harrisville-Leland complex, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation X, Soil X, Hydrology X, significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No X  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes _____ No <u>X</u>	

Remarks:  
 Data point may have been part of a detention basin but has now been filled with at least 2 ft or more of fill. Vegetation partially regrowing with hydrophytes, but the soil is dry, non-hydric fill material.

## VEGETATION— Use scientific names of plants.

**Absolute % Cover** **Dominant Species** **Indicator Status**

### Tree Stratum

### Shrub Stratum

### Herb Stratum (Plot size: 30 Ft )

Hordeum marinum	40	Y	FAC
Hordeum jubatum	5	N	FAC
Puccinellia nuttalliana	5	N	FACW
	50	=Total Cover	

### Vine Stratum

### Dominance Test Worksheet:

Number of Dominant Species That are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across all Strata: 1 (B)

Percent of Dominant Species That are OBL, FACW, or FAC: 100.0% (A/B)

### Prevalence Index Worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>5</u>	x 2 = <u>10</u>
FAC species <u>45</u>	x 3 = <u>135</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>50</u> (A)	<u>145</u> (B)

Prevalence Index = B/A = 2.90

### Hydrophytic Vegetation Indicators:

Rapid Test for Hydrophytic Vegetation  
X Dominance Test > 50%  
X Prevalence Index ≤ 3.0  
 Morphological Adaptations (Provide supporting data in Remarks or on a separate sheet)  
 Problematic Hydrophytic Vegetation (Explain)  
 Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Hydrophytic Vegetation Present?** Yes X No \_\_\_\_\_

% Bare Ground in Herb Stratum 50 % Cover of Biotic Crust

Remarks: (Include photo numbers here or on a separate sheet.)

Vegetation qualifies as hydrophytic.

**Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of Indicators.)**

 Soil Map Unit Name: Harrisville-Leland complex, 0 to 1 percent slopes NWI Classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No \_\_\_\_\_ (If No, explain in Remarks)  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, significantly disturbed? Are "Normal Circumstances" present? Yes X No \_\_\_\_\_  
 Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, Hydrology \_\_\_\_\_, naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS - Attach a site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <u>X</u> <b>Wetland ID:</b> _____
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes <u>X</u> No _____	

Remarks:  
 Non-wetland point adjacent to wetland. Soils nearly meet hydric criteria - chroma is 3 not 2 but with redox concentrations. Wetland hydrology was observed, along with hydrophytic vegetation that includes some dominant upland species. Wetland "in" pit adjacent downslope (east); area transitions to upland vegetation upslope (west).

## VEGETATION - Use scientific names of plants.

Secondary Indicators (minimum of two required)

- ☐ Water Marks (B1) (Riverine)  
☐ Sediment Deposits (B2) (Riverine)  
☐ Drift Deposits (B3) (Riverine)  
☐ Drainage Patterns (B10)  
☐ Dry-Season Water Table (C2)  
☐ Crayfish Burrows (C8)  
☐ Saturation Visible on Aerial Imag.(C9)  
☐ Shallow Aquitard (D3)  
☒ FAC-Neutral Test (D5)

**Field Observations:**

Surface Water Present?	Yes _____ No <u>X</u>	Depth (inches):	__
Water Table Present?	Yes _____ No <u>X</u>	Depth (inches):	13
Saturation Present?	Yes <u>X</u> No _____	Depth (inches):	11

(includes capillary fringe)

**Wetland Hydrology Present?** Yes X No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:  
Saturation within 12 in. meets wetland hydrology indicator, and the water table is also very close to meeting high water table indicator (within 20 minutes of digging pit).

**Appendix D**  
**List of Plant Species Observed**

## Appendix D: List of Plant Species Observed

Scientific Name <sup>1</sup>	Common Name	Indicator Status <sup>2</sup>
<i>Acer negundo</i>	boxelder	FACW
<i>Achillea millefolium</i>	common yarrow	FACU
<i>Agropyron cristatum</i>	crested wheatgrass	NL
<i>Agrostis exarata</i>	spike bentgrass	FACW
<i>Agrostis gigantea</i>	redtop	FACW
<i>Agrostis stolonifera</i>	creeping bentgrass	FACW
<i>Allenrolfea occidentalis</i>	iodinebush	FACW
<i>Alopecurus geniculatus</i>	water foxtail	OBL
<i>Amaranthus retroflexus</i>	redroot amaranth	FACU
<i>Ambrosia artemisiifolia</i>	annual ragweed	FACU
<i>Ambrosia psilostachya</i>	Cuman ragweed	FACU
<i>Apocynum cannabinum</i>	Indianhemp	FAC
<i>Arctium minus</i>	lesser burdock	FACU
<i>Aristida dichotoma</i>	churchmouse threeawn	FACU
<i>Asclepias speciosa</i>	showy milkweed	FAC
<i>Atriplex hillmanii</i>	Hillman's silverscale	FACU
<i>Atriplex micrantha</i>	twoscale saltbush	NL
<i>Bassia californica</i>	rusty molly	NL
<i>Bassia hyssopifolia</i>	fivehorn smotherweed	FACU
<i>Bassia scoparia</i>	burningbush	FAC
<i>Bolboschoenus maritimus</i>	cosmopolitan bulrush	OBL
<i>Brassica juncea</i>	Chinese mustard	FACU
<i>Bromus arvensis</i>	field brome	FACU
<i>Bromus inermis</i>	smooth brome	FACU
<i>Bromus marginatus</i>	mountain brome	NL
<i>Bromus racemosus</i>	bald brome	NL
<i>Bromus tectorum</i>	cheatgrass	NL
<i>Capsella bursa-pastoris</i>	shepherd's purse	FACU
<i>Cardaria draba</i>	whitetop	NL
<i>Carduus nutans</i>	nodding plumeless thistle	FACU
<i>Carex nebrascensis</i>	Nebraska sedge	OBL
<i>Carex pellita</i>	woolly sedge	OBL
<i>Carex praeegracilis</i>	clustered field sedge	FACW
<i>Chenopodium album</i>	lambsquarters	FACU
<i>Chenopodium chenopodioides</i>	low goosefoot	FACW
<i>Chenopodium rubrum</i>	red goosefoot	FACW

<i>Cichorium intybus</i>	chicory	FACU
<i>Cirsium arvense</i>	Canadian thistle	FACU
<i>Cirsium vulgare</i>	bull thistle	FACU
<i>Comarum palustre</i>	purple marshlocks	OBL
<i>Conium maculatum</i>	poison hemlock	FACW
<i>Convolvulus arvensis</i>	field bindweed	NL
<i>Convolvulus equitans</i>	Texas bindweed	FACU
<i>Conyza bonariensis</i>	asthmaweed	NL
<i>Conyza canadensis</i>	Canadian horseweed	FACU
<i>Cordylanthus maritimus</i>	saltmarsh bird's-beak	OBL
<i>Curcubita</i> sp.	winter squash	NL
<i>Dactylis glomerata</i>	orchardgrass	FACU
<i>Delphinium hesperium</i>	foothill larkspur	FAC
<i>Descurainia incana</i>	mountain tansymustard	FACU
<i>Descurainia pinnata</i>	western tansymustard	NL
<i>Dipsacus fullonum</i>	Fuller's teasel	FAC
<i>Distichlis spicata</i>	saltgrass	FAC
<i>Echinochloa crus-galli</i>	barnyardgrass	FACW
<i>Elaeagnus angustifolia</i>	Russian olive	FAC
<i>Eleocharis palustris</i>	common spikerush	OBL
<i>Elymus elymoides</i>	squirreltail	FACU
<i>Elymus repens</i>	quackgrass	FAC
<i>Elymus trachycaulus</i>	slender wheatgrass	FACU
<i>Epilobium ciliatum</i>	fringed willowherb	FACW
<i>Epilobium torreyi</i>	Torrey's willowherb	FACW
<i>Equisetum arvense</i>	field horsetail	FAC
<i>Erodium botrys</i>	longbeak stork's bill	FACU
<i>Euthamia occidentalis</i>	western goldentop	FACW
<i>Festuca idahoensis</i>	Idaho fescue	FACU
<i>Festuca ovina</i>	sheep fescue	FACU
<i>Festuca rubra</i>	red fescue	FAC
<i>Glycyrrhiza lepidota</i>	American licorice	FAC
<i>Grindelia squarrosa</i>	curlycup gumweed	FACU
<i>Helianthus annuus</i>	common sunflower	FACU
<i>Hordeum brachyantherum</i>	meadow barley	FACW
<i>Hordeum jubatum</i>	foxtail barley	FAC
<i>Hordeum marinum</i>	seaside barley	FAC
<i>Hordeum pusillum</i>	little barley	FACU
<i>Iva axillaris</i>	povertyweed	FAC
<i>Juncus acutus</i>	spiny rush	FACW
<i>Juncus alpinoarticulatus</i>	northern green rush	OBL

<i>Juncus arcticus</i> ssp. <i>littoralis</i>	mountain rush/baltic rush	FACW
<i>Juncus bufonius</i>	toad rush	FACW
<i>Juncus confusus</i>	Colorado rush	FAC
<i>Juncus torreyi</i>	Torrey's rush	FACW
<i>Lactuca serriola</i>	prickly lettuce	FACU
<i>Lemna minor</i>	common duckweed	OBL
<i>Lepidium latifolium</i>	broadleaved pepperweed	FAC
<i>Lepidium perfoliatum</i>	clasping pepperweed	FACU
<i>Linum lewisii</i>	Lewis flax	NL
<i>Lythrum salicaria</i>	purple loosestrife	OBL
<i>Maianthemum stellatum</i>	starry false lily of the valley	FACU
<i>Malus fusca</i>	Oregon crab apple	FAC
<i>Malva neglecta</i>	common mallow	NL
<i>Malvella leprosa</i>	alkali mallow	FACU
<i>Medicago lupulina</i>	black medick	FAC
<i>Medicago sativa</i>	alfalfa	UPL
<i>Melilotus officinalis</i>	sweetclover	FACU
<i>Mentha arvensis</i>	wild mint	FACW
<i>Mentha spicata</i>	spearmint	FACW
<i>Muhlenbergia asperifolia</i>	scratchgrass	FACW
<i>Nasturtium officinale</i>	watercress	OBL
<i>Onopordum acanthium</i>	Scotch cottonthistle	NL
<i>Panicum capillare</i>	witchgrass	FACU
<i>Pascopyrum smithii</i>	western wheatgrass	FAC
<i>Persicaria maculosa</i>	spotted ladythumb	FACW
<i>Phalaris angusta</i>	timothy canarygrass	FACW
<i>Phalaris arundinacea</i>	reed canarygrass	FACW
<i>Phalaris canariensis</i>	annual canarygrass	FACU
<i>Phleum pratense</i>	timothy	FACU
<i>Phragmites australis</i>	common reed	FACW
<i>Plagiobothrys leptocladus</i>	finebranched popcornflower	OBL
<i>Plantago lanceolata</i>	narrowleaf plantain	FAC
<i>Plantago major</i>	common plantain	FAC
<i>Poa bulbosa</i>	bulbous bluegrass	FACU
<i>Poa leptocoma</i>	marsh bluegrass	FACW
<i>Poa palustris</i>	fowl bluegrass	FAC
<i>Poa pratensis</i>	Kentucky bluegrass	FAC
<i>Poa secunda</i>	Sandberg bluegrass	FACU
<i>Poa trivialis</i>	rough bluegrass	FACW
<i>Polygonum ramosissimum</i>	bushy knotweed	FAC
<i>Polypogon monspeliensis</i>	annual rabbitsfoot grass	FACW

<i>Populus angustifolia</i>	narrowleaf cottonwood	FACW
<i>Populus deltoides</i>	eastern cottonwood	FAC
<i>Populus fremontii</i>	Fremont cottonwood	FAC
<i>Prunus americana</i>	American plum	FACU
<i>Puccinellia fasciculata</i>	saltmarsh alkaligrass	OBL
<i>Puccinellia nuttalliana</i>	Nuttall's alkaligrass	FACW
<i>Pyrrocoma lanceolata</i>	lanceleaf goldenweed	FAC
<i>Ranunculus alismifolius</i>	plantainleaf buttercup	FACW
<i>Ranunculus cymbalaria</i>	alkali buttercup	OBL
<i>Ranunculus orthorhynchus</i>	straightbeak buttercup	FACW
<i>Ranunculus repens</i>	creeping buttercup	FAC
<i>Ranunculus sceleratus</i>	cursed buttercup	OBL
<i>Rorippa curvipes</i>	bluntleaf yellowcress	FACW
<i>Rosa multiflora</i>	multiflora rose	FACU
<i>Rosa woodsii</i>	Woods' rose	FACU
<i>Rumex crispus</i>	curly dock	FAC
<i>Sagina saginoides</i>	arctic pearlwort	FACW
<i>Salicornia rubra</i>	red swampfire	OBL
<i>Salix exigua</i>	narrowleaf willow	FACW
<i>Salix fragilis</i>	crack willow	FAC
<i>Salix interior</i>	sandbar willow	FACW
<i>Salix lasiolepis</i>	arroyo willow	FACW
<i>Sarcobatus vermiculatus</i>	greasewood	FACU
<i>Schedonorus pratensis</i>	meadow fescue	FACU
<i>Schedonorus arundinaceus</i>	tall fescue	FACU
<i>Schoenoplectus acutus</i>	hardstem bulrush	OBL
<i>Schoenoplectus americanus</i>	chairmaker's bulrush	OBL
<i>Schoenoplectus pungens</i>	common threesquare	OBL
<i>Sclerochloa dura</i>	common hardgrass	NL
<i>Secale cereale</i>	cereal rye	NL
<i>Sisymbrium altissimum</i>	tall tumbledustard	FACU
<i>Solanum dulcamara</i>	climbing nightshade	FAC
<i>Solidago canadensis</i>	Canada goldenrod	NL
<i>Sonchus arvensis</i>	field sowthistle	FACU
<i>Sorghum halepense</i>	Johnsongrass	FACU
<i>Spergularia diandra</i>	alkali sandspurry	FACW
<i>Spergularia maritima</i>	media sandspurry	FACW
<i>Spergularia rubra</i>	red sandspurry	FAC
<i>Sporobolus airoides</i>	alkali sacaton	FAC
<i>Sporobolus cryptandrus</i>	sand dropseed	FACU
<i>Suaeda calceoliformis</i>	Pursh seepweed	FACW

<i>Suaeda moquinii</i>	Mojave seablite	OBL
<i>Suaeda occidentalis</i>	western seepweed	FACW
<i>Symphyotrichum chilense</i>	Pacific aster	FAC
<i>Symphyotrichum ciliatum</i>	rayless alkali aster	FACW
<i>Symphyotrichum lanceolatum</i>	white panicle aster	OBL
<i>Tamarix aphylla</i>	Athel tamarisk	FAC
<i>Tamarix ramosissima</i>	saltcedar	FAC
<i>Taraxacum officinale</i>	common dandelion	FACU
<i>Thinopyrum intermedium</i>	intermediate wheatgrass	NL
<i>Thinopyrum ponticum</i>	tall wheatgrass	NL
<i>Tragopogon dubius</i>	yellow salsify	NL
<i>Trifolium fragiferum</i>	strawberry clover	FAC
<i>Trifolium pratense</i>	red clover	FACU
<i>Trifolium repens</i>	white clover	FACU
<i>Triglochin maritima</i>	seaside arrow-grass	OBL
<i>Typha angustifolia</i>	narrowleaf cattail	OBL
<i>Typha latifolia</i>	broadleaf cattail	OBL
<i>Ulmus pumila</i>	Siberian elm	UPL
<i>Urtica dioica</i>	stinging nettle	FAC
<i>Xanthium strumarium</i>	rough cocklebur	FAC

<sup>1</sup> Naming conventions according to USDA NRCS Plants Database (<https://plants.usda.gov/java/>) and 2016 NWPL (Lichvar and others 2016).

<sup>2</sup> Indicator status according to 2016 NWPL (Lichvar and others 2016).

**NRCS Custom Soil Resource Report for West Davis Corridor**

United States  
Department of  
Agriculture

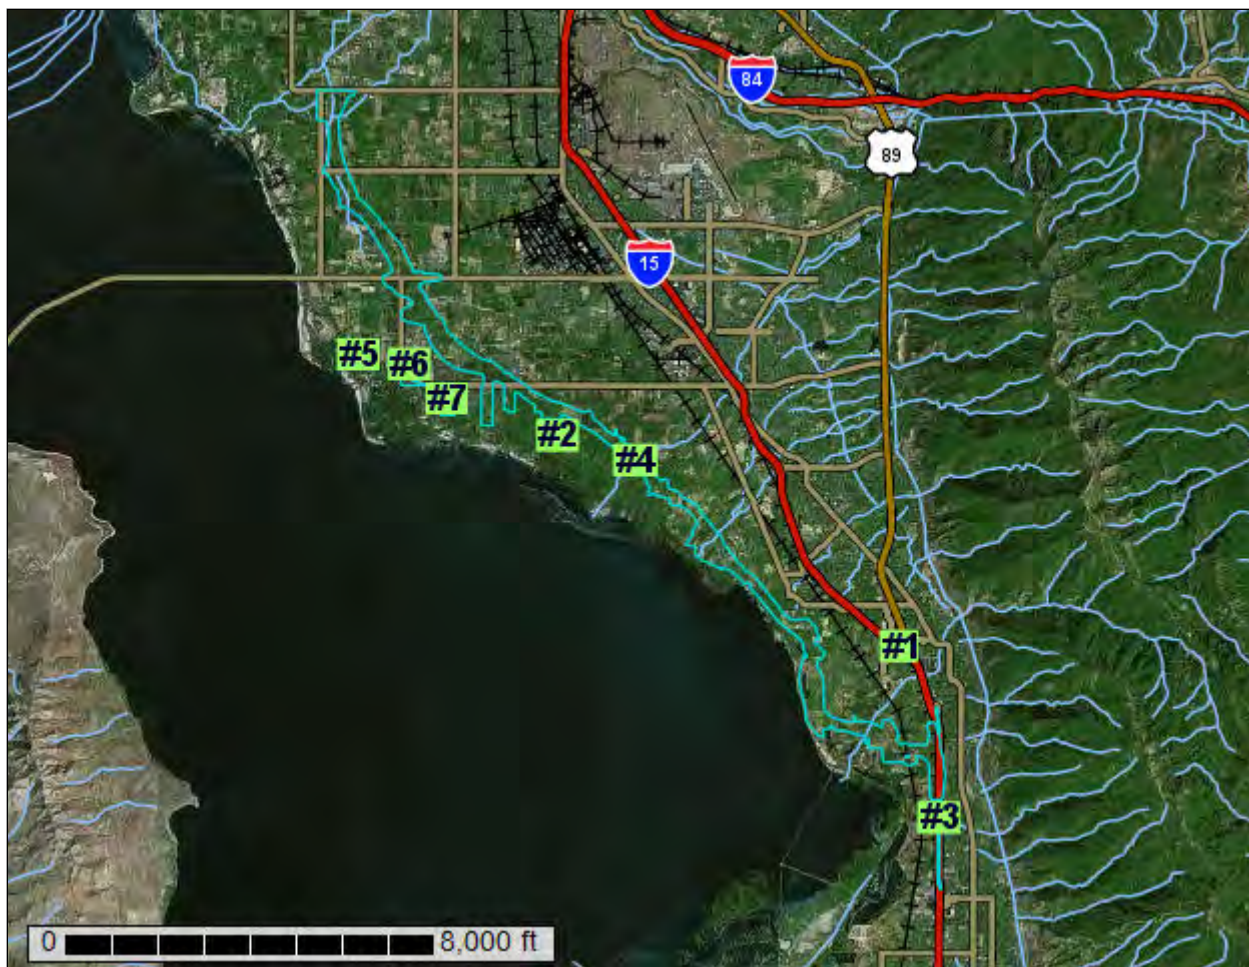

**NRCS**

Natural  
Resources  
Conservation  
Service

A product of the National  
Cooperative Soil Survey,  
a joint effort of the United  
States Department of  
Agriculture and other  
Federal agencies, State  
agencies including the  
Agricultural Experiment  
Stations, and local  
participants

# Custom Soil Resource Report for **Davis-Weber Area, Utah**

## West Davis Corridor

# Preface

---

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist ([http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2\\_053951](http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951)).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

# How Soil Surveys Are Made

---

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

## Custom Soil Resource Report

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

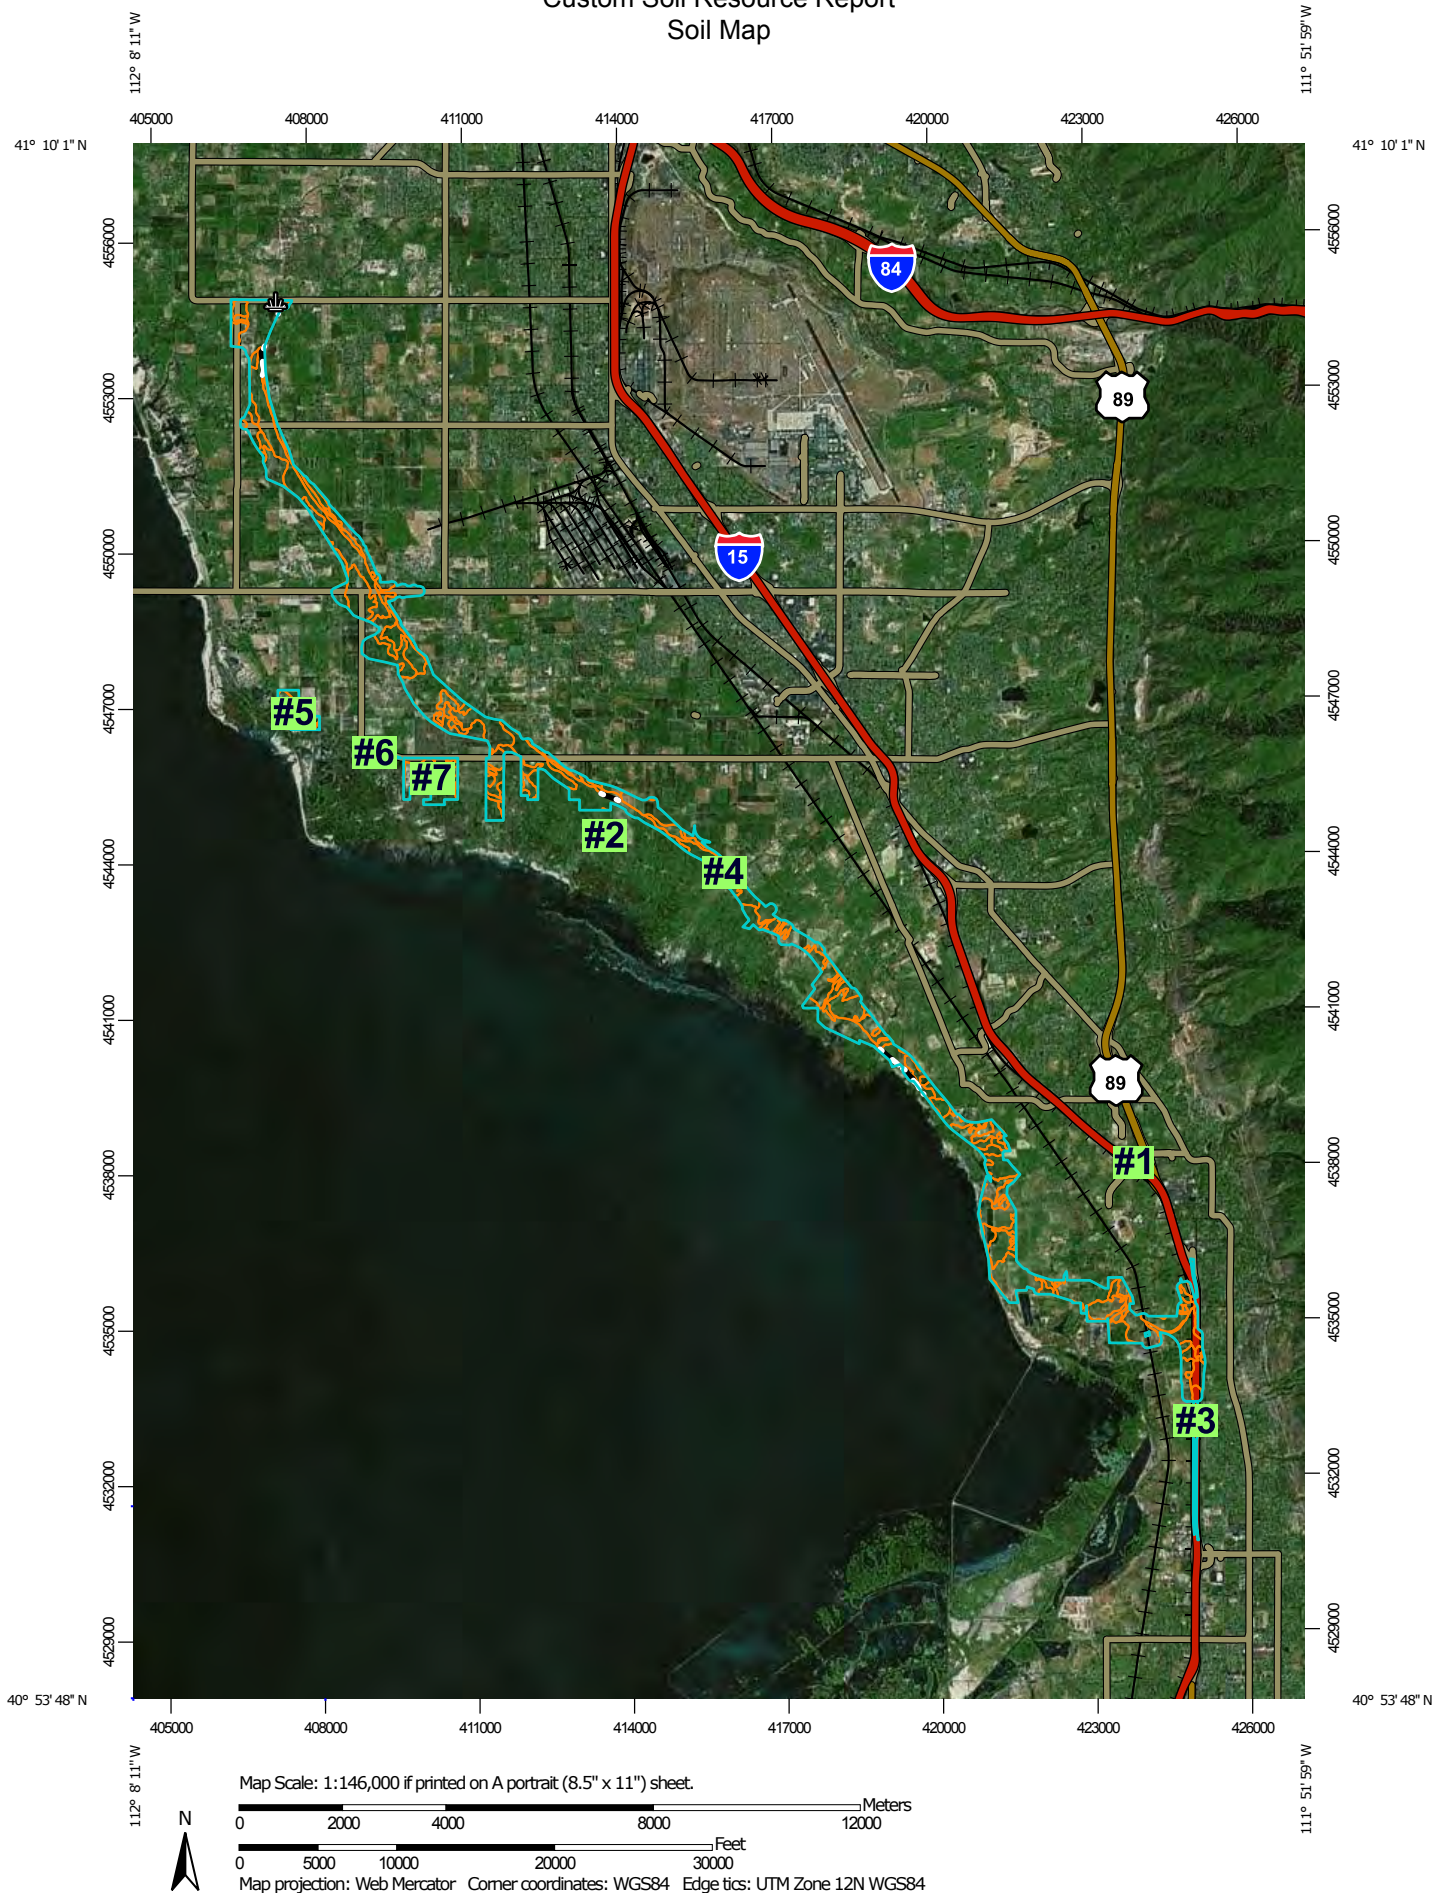

# Soil Map

---

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Davis-Weber Area, Utah

Survey Area Data: Version 10, Sep 9, 2016

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 1, 1999—Dec 31, 2003

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas

are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

## Davis-Weber Area, Utah

### AbC—Ackmen loam, 3 to 6 percent slopes

#### Map Unit Setting

*National map unit symbol:* j52d  
*Elevation:* 4,400 to 5,300 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 46 to 52 degrees F  
*Frost-free period:* 120 to 150 days  
*Farmland classification:* Prime farmland if irrigated

#### Map Unit Composition

*Ackmen and similar soils:* 100 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

#### Description of Ackmen

##### Setting

*Landform:* Alluvial fans  
*Down-slope shape:* Concave  
*Across-slope shape:* Convex  
*Parent material:* Slope alluvium

##### Typical profile

*Ap - 0 to 6 inches:* loam  
*AC - 6 to 32 inches:* loam  
*C - 32 to 60 inches:* loam

##### Properties and qualities

*Slope:* 3 to 6 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Well drained  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.60 to 2.00 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Salinity, maximum in profile:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)  
*Available water storage in profile:* High (about 9.6 inches)

##### Interpretive groups

*Land capability classification (irrigated):* 3e  
*Land capability classification (nonirrigated):* 3s  
*Hydrologic Soil Group:* B  
*Ecological site:* Upland Loam (Bonneville Big Sagebrush) North (R028AY310UT)  
*Other vegetative classification:* Upland Loam (Mountain Big Sagebrush) (028AY310UT)  
*Hydric soil rating:* No

## **Ac—Airport silt loam, 0 to 2 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* j52h  
*Elevation:* 4,200 to 4,300 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

### **Map Unit Composition**

*Airport and similar soils:* 95 percent  
*Minor components:* 5 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### **Description of Airport**

#### **Setting**

*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

#### **Typical profile**

*H1 - 0 to 6 inches:* silty clay loam  
*H2 - 6 to 19 inches:* silty clay loam  
*H3 - 19 to 32 inches:* silty clay loam  
*H4 - 32 to 40 inches:* clay loam  
*H5 - 40 to 60 inches:* silty clay loam

#### **Properties and qualities**

*Slope:* 0 to 2 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Somewhat poorly drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 24 to 42 inches  
*Frequency of flooding:* Rare  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 60 percent  
*Salinity, maximum in profile:* Slightly saline to strongly saline (4.0 to 16.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 50.0  
*Available water storage in profile:* Moderate (about 8.4 inches)

#### **Interpretive groups**

*Land capability classification (irrigated):* 3w  
*Land capability classification (nonirrigated):* 7w  
*Hydrologic Soil Group:* D

## Custom Soil Resource Report

*Ecological site:* Alkali Bottom (Alkali Sacaton) (R028AY001UT)

*Hydric soil rating:* No

### Minor Components

#### **Poorly drained soils, hydric, not correlated**

*Percent of map unit:* 5 percent

*Landform:* Lake terraces

*Landform position (three-dimensional):* Tread

*Down-slope shape:* Linear

*Across-slope shape:* Linear

*Hydric soil rating:* Yes

### **Ad—Airport silty clay loam, 0 to 1 percent slopes**

#### **Map Unit Setting**

*National map unit symbol:* j52j

*Elevation:* 4,200 to 4,300 feet

*Mean annual precipitation:* 14 to 18 inches

*Mean annual air temperature:* 48 to 52 degrees F

*Frost-free period:* 160 to 180 days

*Farmland classification:* Not prime farmland

#### **Map Unit Composition**

*Airport and similar soils:* 90 percent

*Minor components:* 10 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

#### **Description of Airport**

##### **Setting**

*Landform:* Lake terraces

*Landform position (three-dimensional):* Tread

*Down-slope shape:* Linear

*Across-slope shape:* Linear

*Parent material:* Lacustrine deposits

##### **Typical profile**

*H1 - 0 to 6 inches:* silty clay loam

*H2 - 6 to 19 inches:* silty clay loam

*H3 - 19 to 32 inches:* silty clay loam

*H4 - 32 to 40 inches:* clay loam

*H5 - 40 to 60 inches:* silty clay loam

##### **Properties and qualities**

*Slope:* 0 to 1 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Somewhat poorly drained

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 24 to 42 inches

## Custom Soil Resource Report

*Frequency of flooding:* Rare  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 60 percent  
*Salinity, maximum in profile:* Slightly saline to strongly saline (4.0 to 16.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 50.0  
*Available water storage in profile:* Moderate (about 8.4 inches)

*Hydric soil rating:* Yes

## AS—Arave-Saltair complex, 0 to 1 percent slopes

### Map Unit Setting

*National map unit symbol:* j529  
*Elevation:* 4,200 to 4,300 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

### Map Unit Composition

*Arave and similar soils:* 75 percent  
*Saltair and similar soils:* 20 percent  
*Minor components:* 5 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

## Description of Arave

### Setting

*Landform:* Lake plains  
*Landform position (three-dimensional):* Talf, dip  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

### Typical profile

*A1 - 0 to 8 inches:* silt loam  
*B1ca - 8 to 12 inches:* loam  
*B2tca - 12 to 18 inches:* clay loam  
*C1 - 18 to 36 inches:* silty clay loam  
*C2 - 36 to 42 inches:* silty clay loam  
*C3 - 42 to 60 inches:* silty clay loam

### Properties and qualities

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Somewhat poorly drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 20 to 40 inches  
*Frequency of flooding:* Rare  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 30 percent  
*Salinity, maximum in profile:* Moderately saline to strongly saline (8.0 to 30.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 60.0  
*Available water storage in profile:* Moderate (about 7.2 inches)

### Interpretive groups

*Land capability classification (irrigated):* 7w  
*Land capability classification (nonirrigated):* 7w  
*Hydrologic Soil Group:* D  
*Ecological site:* Alkali Bottom (Alkali Sacaton) (R028AY001UT)  
*Hydric soil rating:* No

## Description of Saltair

### Setting

*Landform:* Lake plains  
*Landform position (three-dimensional):* Talf, dip  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

### Typical profile

*H1 - 0 to 1 inches:* silt loam  
*H2 - 1 to 4 inches:* silt loam  
*H3 - 4 to 9 inches:* silt loam  
*H4 - 9 to 20 inches:* silty clay loam  
*H5 - 20 to 32 inches:* silt loam  
*H6 - 32 to 60 inches:* silty clay loam

**Properties and qualities**

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Very poorly drained  
*Runoff class:* Very high  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 0 to 12 inches  
*Frequency of flooding:* Occasional  
*Frequency of ponding:* Occasional  
*Calcium carbonate, maximum in profile:* 40 percent  
*Gypsum, maximum in profile:* 2 percent  
*Salinity, maximum in profile:* Strongly saline (100.0 to 250.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 1,000.0  
*Available water storage in profile:* Very low (about 0.6 inches)

**Interpretive groups**

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 8  
*Hydrologic Soil Group:* C/D  
*Ecological site:* Desert Salty Silt (Iodinebush) (R028AY132UT)  
*Hydric soil rating:* Yes

**Minor Components**

**Croy**

*Percent of map unit:* 3 percent  
*Landform:* Lake plains

**Goggin**

*Percent of map unit:* 2 percent  
*Landform:* Dunes, ridges  
*Landform position (three-dimensional):* Riser  
*Down-slope shape:* Convex  
*Across-slope shape:* Convex, linear  
*Ecological site:* Upland Sand (Black Greasewood, Indian Ricegrass) (R028AY330UT)

**CaA—Chance loam, 0 to 3 percent slopes**

**Map Unit Setting**

*National map unit symbol:* j52p  
*Elevation:* 4,200 to 4,500 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Farmland of statewide importance

### Map Unit Composition

*Chance and similar soils:* 100 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Chance

#### Setting

*Landform:* Depressions on lake terraces

*Landform position (three-dimensional):* Tread, dip

*Down-slope shape:* Concave, linear

*Across-slope shape:* Concave, linear

*Parent material:* Alluvium

#### Typical profile

*A11 - 0 to 3 inches:* loam

*A12 - 3 to 8 inches:* loam

*AC - 8 to 19 inches:* silt loam

*C1G - 19 to 41 inches:* loamy fine sand

*C1G - 41 to 57 inches:* loamy fine sand

*C3G - 57 to 72 inches:* fine sandy loam

#### Properties and qualities

*Slope:* 0 to 3 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Poorly drained

*Runoff class:* Very high

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.60 to 2.00 in/hr)

*Depth to water table:* About 0 to 18 inches

*Frequency of flooding:* Occasional

*Frequency of ponding:* None

*Calcium carbonate, maximum in profile:* 10 percent

*Salinity, maximum in profile:* Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)

*Available water storage in profile:* Moderate (about 6.9 inches)

#### Interpretive groups

*Land capability classification (irrigated):* 3w

*Land capability classification (nonirrigated):* 7w

*Hydrologic Soil Group:* B/D

*Ecological site:* Wet Fresh Meadow (R028AY020UT)

*Hydric soil rating:* Yes

## CIA—Chance-Ironton complex, 0 to 3 percent slopes

### Map Unit Setting

*National map unit symbol:* j52n

*Elevation:* 4,200 to 4,500 feet

*Mean annual precipitation:* 14 to 18 inches

*Mean annual air temperature:* 48 to 52 degrees F

*Frost-free period:* 160 to 180 days

*Farmland classification:* Not prime farmland

### Map Unit Composition

*Chance and similar soils:* 80 percent

*Ironton and similar soils:* 20 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Chance

#### Setting

*Landform:* Depressions

*Landform position (three-dimensional):* Dip

*Down-slope shape:* Concave

*Across-slope shape:* Concave

*Parent material:* Alluvium

#### Typical profile

*A11 - 0 to 3 inches:* loam

*A12 - 3 to 8 inches:* loam

*AC - 8 to 19 inches:* silt loam

*C1G - 19 to 41 inches:* loamy fine sand

*C1G - 41 to 57 inches:* loamy fine sand

*C3G - 57 to 72 inches:* fine sandy loam

#### Properties and qualities

*Slope:* 0 to 3 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Poorly drained

*Runoff class:* Very high

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.60 to 2.00 in/hr)

*Depth to water table:* About 0 to 18 inches

*Frequency of flooding:* Occasional

*Frequency of ponding:* None

*Calcium carbonate, maximum in profile:* 10 percent

*Salinity, maximum in profile:* Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)

*Available water storage in profile:* Moderate (about 6.9 inches)

#### Interpretive groups

*Land capability classification (irrigated):* 3w

*Land capability classification (nonirrigated):* 7w

*Hydrologic Soil Group:* B/D

*Ecological site:* Wet Fresh Meadow (R028AY020UT)

*Hydric soil rating:* Yes

### Description of Ironton

#### Setting

*Landform:* Knolls on lake terraces

*Landform position (three-dimensional):* Tread

*Down-slope shape:* Convex, linear

*Across-slope shape:* Convex, linear

*Parent material:* Alluvium and/or lacustrine deposits

#### Typical profile

*A11 - 0 to 6 inches:* silt loam

*A12 - 6 to 16 inches:* silt loam

*A13ca - 16 to 21 inches:* loam

## Custom Soil Resource Report

*C1ca - 21 to 36 inches:* loam  
*C2ca - 36 to 48 inches:* silt loam  
*C3 - 48 to 60 inches:* silt loam

### Properties and qualities

*Slope:* 0 to 3 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Somewhat poorly drained  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.60 to 2.00 in/hr)  
*Depth to water table:* About 24 to 36 inches  
*Frequency of flooding:* Rare  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 40 percent  
*Salinity, maximum in profile:* Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 13.0  
*Available water storage in profile:* High (about 10.0 inches)

### Interpretive groups

*Land capability classification (irrigated):* 2w  
*Land capability classification (nonirrigated):* 4w  
*Hydrologic Soil Group:* C

*Hydric soil rating:* No

## Co—Cobbly alluvial land

### Map Unit Setting

*National map unit symbol:* j52q  
*Elevation:* 4,200 to 4,500 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

### Map Unit Composition

*Cobbly alluvial land:* 90 percent  
*Minor components:* 10 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Cobbly Alluvial Land

#### Setting

*Landform:* Flood plains  
*Landform position (three-dimensional):* Talf, dip  
*Down-slope shape:* Linear  
*Across-slope shape:* Concave

#### Typical profile

*C - 0 to 60 inches:* stratified cobbly sand to sand to fine sandy loam

**Properties and qualities**

*Natural drainage class:* Somewhat poorly drained  
*Frequency of flooding:* Frequent

**Interpretive groups**

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 8w  
*Hydric soil rating:* Yes

**Minor Components**

**Poorly drained soils, hydric, not correlated**

*Percent of map unit:* 10 percent  
*Landform:* Flood plains  
*Landform position (three-dimensional):* Talf, dip  
*Down-slope shape:* Linear  
*Across-slope shape:* Concave  
*Hydric soil rating:* Yes

**CuA—Cudahy silt loam, 0 to 1 percent slopes**

**Map Unit Setting**

*National map unit symbol:* j52s  
*Elevation:* 4,200 to 4,450 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

**Map Unit Composition**

*Cudahy and similar soils:* 100 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

**Description of Cudahy**

**Setting**

*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

**Typical profile**

*A1 - 0 to 6 inches:* silt loam  
*A12ca - 6 to 16 inches:* silt loam  
*C1cag - 16 to 23 inches:* silt loam  
*C2cam - 23 to 31 inches:* indurated  
*C3cam - 31 to 44 inches:* indurated  
*C4g - 44 to 60 inches:* silty clay loam

**Properties and qualities**

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* 20 to 40 inches to petrocalcic  
*Natural drainage class:* Poorly drained  
*Runoff class:* Very high  
*Capacity of the most limiting layer to transmit water (Ksat):* Very low to moderately low (0.00 to 0.06 in/hr)  
*Depth to water table:* About 0 to 24 inches  
*Frequency of flooding:* Occasional  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 75 percent  
*Salinity, maximum in profile:* Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 30.0  
*Available water storage in profile:* Low (about 3.9 inches)

**Interpretive groups**

*Land capability classification (irrigated):* 3w  
*Land capability classification (nonirrigated):* 7w

*Farmland classification:* Prime farmland if irrigated and drained

### Map Unit Composition

*Draper variant and similar soils:* 100 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Draper Variant

#### Setting

*Landform:* Alluvial fans

*Down-slope shape:* Concave

*Across-slope shape:* Convex

*Parent material:* Alluvium

#### Typical profile

*H1 - 0 to 8 inches:* gravelly loam

*H2 - 8 to 24 inches:* gravelly loam

*H3 - 24 to 60 inches:* gravelly loamy fine sand

#### Properties and qualities

*Slope:* 3 to 6 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Somewhat poorly drained

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high (0.60 to 2.00 in/hr)

*Depth to water table:* About 36 to 60 inches

*Frequency of flooding:* Very rare

*Frequency of ponding:* None

*Calcium carbonate, maximum in profile:* 5 percent

*Salinity, maximum in profile:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)

*Available water storage in profile:* Moderate (about 7.1 inches)

**Interpretive groups**

*Land capability classification (irrigated):* 3w

*Land capability classification (nonirrigated):* 3w

*Hydrologic Soil Group:* B

*Ecological site:* Semiwet Fresh Meadow (R028AY012UT)

*Hydric soil rating:* No

**EP—Eimarsh-Playas-Pintailake complex, 0 to 1 percent slopes**

**Map Unit Setting**

*National map unit symbol:* 1qr61

*Elevation:* 4,190 to 4,290 feet

*Mean annual precipitation:* 12 to 16 inches

*Mean annual air temperature:* 48 to 52 degrees F

*Frost-free period:* 140 to 180 days

*Farmland classification:* Not prime farmland

**Map Unit Composition**

*Eimarsh and similar soils:* 60 percent

*Playas:* 15 percent

*Pintailake and similar soils:* 10 percent

*Minor components:* 15 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

**Description of Eimarsh**

**Setting**

*Landform:* Lake plains

*Landform position (three-dimensional):* Talf, dip

*Down-slope shape:* Linear

*Across-slope shape:* Linear

**Typical profile**

*H1 - 0 to 5 inches:* silty clay loam

*H2 - 5 to 15 inches:* silty clay

*H3 - 15 to 60 inches:* silty clay

**Properties and qualities**

*Slope:* 0 to 1 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Poorly drained

*Runoff class:* Medium

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 10 to 20 inches

*Frequency of flooding:* None

*Frequency of ponding:* Frequent

*Calcium carbonate, maximum in profile:* 30 percent

*Gypsum, maximum in profile:* 10 percent

*Salinity, maximum in profile:* Strongly saline (30.0 to 80.0 mmhos/cm)

## Custom Soil Resource Report

*Sodium adsorption ratio, maximum in profile:* 100.0

*Available water storage in profile:* Very low (about 2.3 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 7w

*Hydrologic Soil Group:* C/D

*Ecological site:* Wet Saline Meadow (Saltgrass) (R028AY024UT)

*Hydric soil rating:* Yes

### Description of Playas

#### Setting

*Landform:* Lake plains

*Landform position (three-dimensional):* Talf, dip

*Down-slope shape:* Linear

*Across-slope shape:* Linear

#### Typical profile

*H1 - 0 to 60 inches:* stratified fine sandy loam to silty clay

#### Properties and qualities

*Slope:* 0 to 1 percent

*Natural drainage class:* Very poorly drained

*Runoff class:* Negligible

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 0 inches

*Frequency of ponding:* Frequent

*Calcium carbonate, maximum in profile:* 40 percent

*Gypsum, maximum in profile:* 2 percent

*Salinity, maximum in profile:* Strongly saline (32.0 to 100.0 mmhos/cm)

*Sodium adsorption ratio, maximum in profile:* 90.0

*Available water storage in profile:* Very low (about 1.2 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 8w

*Hydrologic Soil Group:* D

*Ecological site:* Desert Salty Silt (Iodinebush) (R028AY132UT)

*Hydric soil rating:* Yes

### Description of Pintailake

#### Setting

*Landform:* Lake plains

*Landform position (three-dimensional):* Talf, dip

*Down-slope shape:* Linear

*Across-slope shape:* Linear

#### Typical profile

*Oi - 0 to 3 inches:* slightly decomposed plant material

*H1 - 3 to 10 inches:* silt loam

*H2 - 10 to 31 inches:* silty clay loam

*H3 - 31 to 46 inches:* silty clay

*H4 - 46 to 60 inches:* silty clay

**Properties and qualities**

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Very poorly drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Ecological site:* Semiwet Fresh Meadow (R028AY012UT)  
*Hydric soil rating:* No

**KaA—Kidman fine sandy loam, 0 to 1 percent slopes**

**Map Unit Setting**

*National map unit symbol:* j53y  
*Elevation:* 4,200 to 5,100 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Prime farmland if irrigated

**Map Unit Composition**

*Kidman and similar soils:* 100 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

**Description of Kidman**

**Setting**

*Landform:* Lake plains  
*Landform position (three-dimensional):* Talf, rise  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

**Typical profile**

*H1 - 0 to 11 inches:* fine sandy loam  
*H2 - 11 to 17 inches:* fine sandy loam  
*H3 - 17 to 27 inches:* fine sandy loam  
*H4 - 27 to 37 inches:* fine sandy loam  
*H5 - 37 to 49 inches:* very fine sandy loam

## Custom Soil Resource Report

*H6 - 49 to 60 inches: very fine sandy loam*

### Properties and qualities

*Slope: 0 to 1 percent*

*Depth to restrictive feature: More than 80 inches*

*Natural drainage class: Well drained*

*Runoff class: Very low*

*Capacity of the most limiting layer to transmit water (Ksat): High (2.00 to 6.00 in/hr)*

*Depth to water table: More than 80 inches*

*Frequency of flooding: None*

*Frequency of ponding: None*

*Calcium carbonate, maximum in profile: 30 percent*

*Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)*

*Available water storage in profile: Moderate (about 7.5 inches)*

### Interpretive groups

*Land capability classification (irrigated): 1*

*Land capability classification (nonirrigated): 3c*

*Hydrologic Soil Group: A*

*Ecological site: Upland Loam (Bonneville Big Sagebrush) North (R028AY310UT)*

*Other vegetative classification: Upland Loam (Mountain Big Sagebrush) (028AY310UT)*

*Hydric soil rating: No*

## KaB—Kidman fine sandy loam, 1 to 3 percent slopes

### Map Unit Setting

*National map unit symbol: j53z*

*Elevation: 4,200 to 5,100 feet*

*Mean annual precipitation: 14 to 18 inches*

*Mean annual air temperature: 48 to 52 degrees F*

*Frost-free period: 160 to 180 days*

*Farmland classification: Prime farmland if irrigated*

### Map Unit Composition

*Kidman and similar soils: 100 percent*

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Kidman

#### Setting

*Landform: Lake terraces*

*Landform position (three-dimensional): Tread*

*Down-slope shape: Linear*

*Across-slope shape: Linear*

*Parent material: Lacustrine deposits*

#### Typical profile

*H1 - 0 to 11 inches: fine sandy loam*

*H2 - 11 to 17 inches: fine sandy loam*

## Custom Soil Resource Report

*H3 - 17 to 27 inches:* fine sandy loam  
*H4 - 27 to 37 inches:* fine sandy loam  
*H5 - 37 to 49 inches:* very fine sandy loam  
*H6 - 49 to 60 inches:* very fine sandy loam

### Properties and qualities

*Slope:* 1 to 3 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Well drained  
*Runoff class:* Very low  
*Capacity of the most limiting layer to transmit water (Ksat):* High (2.00 to 6.00 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 30 percent  
*Salinity, maximum in profile:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)  
*Available water storage in profile:* Moderate (about 7.5 inches)

*Other vegetative classification:* Upland Loam (Mountain Big Sagebrush) (028AY310UT)  
*Hydric soil rating:* No

### KgC—Kilburn gravelly sandy loam, 3 to 6 percent slopes

#### Map Unit Setting

*National map unit symbol:* j548  
*Elevation:* 4,400 to 5,300 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Prime farmland if irrigated

**Map Unit Composition**

*Kilburn and similar soils: 100 percent*

*Estimates are based on observations, descriptions, and transects of the mapunit.*

**Description of Kilburn**

**Setting**

*Landform: Alluvial fans*

*Down-slope shape: Concave*

*Across-slope shape: Convex*

*Parent material: Lacustrine deposits*

**Typical profile**

*A11 - 0 to 5 inches: gravelly sandy loam*

*A12 - 5 to 11 inches: gravelly sandy loam*

*B2 - 11 to 24 inches: very cobbly sandy loam*

*C - 24 to 60 inches: very gravelly loamy coarse sand*

**Properties and qualities**

*Slope: 3 to 6 percent*

*Depth to restrictive feature: More than 80 inches*

*Natural drainage class: Well drained*

*Capacity of the most limiting layer to transmit water (Ksat): High (2.00 to 6.00 in/hr)*

*Depth to water table: More than 80 inches*

*Frequency of flooding: None*

*Frequency of ponding: None*

*Available water storage in profile: Low (about 3.1 inches)*

**Interpretive groups**

*Land capability classification (irrigated): 3s*

*Land capability classification (nonirrigated): 6s*

*Hydrologic Soil Group: A*

*Ecological site: Upland Gravelly Loam (Bonneville Big Sagebrush)  
(R028AY306UT)*

*Hydric soil rating: No*

**Lb—Lakeshore fine sandy loam, 0 to 1 percent slopes**

**Map Unit Setting**

*National map unit symbol: j54q*

*Elevation: 4,200 to 4,400 feet*

*Mean annual precipitation: 14 to 18 inches*

*Mean annual air temperature: 48 to 52 degrees F*

*Frost-free period: 160 to 180 days*

*Farmland classification: Not prime farmland*

**Map Unit Composition**

*Lakeshore and similar soils: 100 percent*

*Estimates are based on observations, descriptions, and transects of the mapunit.*

## Description of Lakeshore

### Setting

*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

### Typical profile

*H1 - 0 to 4 inches:* fine sandy loam  
*H2 - 4 to 8 inches:* silt loam  
*H3 - 8 to 13 inches:* very fine sandy loam  
*H4 - 13 to 19 inches:* loam  
*H5 - 19 to 51 inches:* silt loam  
*H6 - 51 to 64 inches:* silt loam

### Properties and qualities

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Poorly drained  
*Runoff class:* Negligible  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 0 to 20 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* Frequent  
*Calcium carbonate, maximum in profile:* 25 percent  
*Salinity, maximum in profile:* Strongly saline (32.0 to 90.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 90.0  
*Available water storage in profile:* Low (about 4.1 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 7w  
*Hydrologic Soil Group:* C/D  
*Ecological site:* Wet Saline Meadow (Saltgrass) (R028AY024UT)  
*Hydric soil rating:* Yes

## LcB—Layton loamy fine sand, 0 to 3 percent slopes

### Map Unit Setting

*National map unit symbol:* j54r  
*Elevation:* 4,300 to 5,100 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Prime farmland if irrigated

### Map Unit Composition

*Layton and similar soils:* 100 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

## **Description of Layton**

### **Setting**

*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

### **Typical profile**

*Ap - 0 to 7 inches:* loamy fine sand  
*A12 - 7 to 15 inches:* loamy fine sand  
*C1 - 15 to 23 inches:* loamy fine sand  
*C2 - 23 to 29 inches:* loamy fine sand  
*C3ca - 29 to 66 inches:* loamy fine sand

### **Properties and qualities**

*Slope:* 0 to 3 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Well drained  
*Capacity of the most limiting layer to transmit water (Ksat):* High to very high (6.00 to 20.00 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 15 percent  
*Available water storage in profile:* Low (about 5.4 inches)

### **Interpretive groups**

*Land capability classification (irrigated):* 3s  
*Land capability classification (nonirrigated):* 4s  
*Hydrologic Soil Group:* A  
*Ecological site:* Upland Sand (Black Greasewood, Indian Ricegrass)  
(R028AY330UT)  
*Hydric soil rating:* No

## **Lt—Logan silty clay loam, 0 to 3 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* j54x  
*Elevation:* 4,200 to 4,650 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Farmland of statewide importance

### **Map Unit Composition**

*Logan and similar soils:* 95 percent  
*Minor components:* 5 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

## Description of Logan

### Setting

*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Alluvium and/or lacustrine deposits

### Typical profile

*Ap - 0 to 5 inches:* silty clay loam  
*A12 - 5 to 12 inches:* silty clay loam  
*C1cag - 12 to 29 inches:* silty clay loam  
*C2cag - 29 to 46 inches:* silt loam  
*C3g - 46 to 60 inches:* stratified fine sand to silty clay

### Properties and qualities

*Slope:* 0 to 3 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Poorly drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 12 to 30 inches  
*Frequency of flooding:* Rare  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 60 percent  
*Salinity, maximum in profile:* Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 13.0  
*Available water storage in profile:* High (about 9.5 inches)

### Interpretive groups

*Land capability classification (irrigated):* 3w  
*Land capability classification (nonirrigated):* 5w  
*Hydrologic Soil Group:* C/D  
*Ecological site:* Wet Fresh Meadow (R028AY020UT)  
*Hydric soil rating:* Yes

## Minor Components

### Peat surface soils

*Percent of map unit:* 5 percent  
*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Hydric soil rating:* Yes

## **Lw—Logan silty clay loam, shallow water table, 0 to 3 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* j54z  
*Elevation:* 4,200 to 4,650 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

### **Map Unit Composition**

*Logan and similar soils:* 95 percent  
*Minor components:* 5 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### **Description of Logan**

#### **Setting**

*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Alluvium and/or lacustrine deposits

#### **Typical profile**

*Ap - 0 to 5 inches:* silty clay loam  
*A12 - 5 to 12 inches:* silty clay loam  
*C1cag - 12 to 29 inches:* silty clay loam  
*C2cag - 29 to 46 inches:* silt loam  
*C3g - 46 to 60 inches:* stratified fine sand to silty clay

#### **Properties and qualities**

*Slope:* 0 to 3 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Very poorly drained  
*Runoff class:* Very high  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 0 to 10 inches  
*Frequency of flooding:* Frequent  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 60 percent  
*Salinity, maximum in profile:* Moderately saline to strongly saline (8.0 to 16.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 30.0  
*Available water storage in profile:* Moderate (about 7.1 inches)

#### **Interpretive groups**

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 7w

## Custom Soil Resource Report

*Hydrologic Soil Group:* C/D  
*Ecological site:* Wet Fresh Meadow (R028AY020UT)  
*Hydric soil rating:* Yes

### Minor Components

#### Peat surface soils

*Percent of map unit:* 5 percent  
*Landform:* Lake terraces  
*Landform position (three-dimensional):* Tread  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear

## PaD—Parleys loam, 6 to 10 percent slopes

### Map Unit Setting

*National map unit symbol:* j55c  
*Elevation:* 4,300 to 5,050 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

### Map Unit Composition

*Parleys and similar soils:* 100 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Parleys

#### Setting

*Landform:* Escarpments, lake terraces  
*Landform position (three-dimensional):* Tread

## Custom Soil Resource Report

*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Lacustrine deposits

### Typical profile

*Ap - 0 to 6 inches:* loam  
*A12 - 6 to 15 inches:* loam  
*B2t - 15 to 26 inches:* clay loam  
*B3ca - 26 to 33 inches:* silty clay loam  
*C1ca - 33 to 48 inches:* silt loam  
*C2 - 48 to 60 inches:* stratified fine sand to silty clay loam

### Properties and qualities

*Slope:* 6 to 10 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Well drained  
*Runoff class:* High  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Calcium carbonate, maximum in profile:* 40 percent  
*Salinity, maximum in profile:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)  
*Available water storage in profile:* High (about 9.4 inches)

### Interpretive groups

*Land capability classification (irrigated):* 2e  
*Land capability classification (nonirrigated):* 3e  
*Hydrologic Soil Group:* C  
*Ecological site:* Upland Loam (Bonneville Big Sagebrush) North (R028AY310UT)  
*Other vegetative classification:* Upland Loam (Mountain Big Sagebrush) (028AY310UT)  
*Hydric soil rating:* No

## PEP—Pintailake-Eimarsh-Playas complex, 0 to 1 percent slopes

### Map Unit Setting

*National map unit symbol:* 1qr5y  
*Elevation:* 4,190 to 4,290 feet  
*Mean annual precipitation:* 12 to 16 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 140 to 180 days  
*Farmland classification:* Not prime farmland

### Map Unit Composition

*Pintailake and similar soils:* 45 percent  
*Eimarsh and similar soils:* 30 percent  
*Playas:* 10 percent  
*Minor components:* 15 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

## Description of Pintailake

### Setting

*Landform:* Lake plains  
*Landform position (three-dimensional):* Talf, dip  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear

### Typical profile

*Oi - 0 to 3 inches:* slightly decomposed plant material  
*H1 - 3 to 10 inches:* silt loam  
*H2 - 10 to 31 inches:* silty clay loam  
*H3 - 31 to 46 inches:* silty clay  
*H4 - 46 to 60 inches:* silty clay

### Properties and qualities

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Very poorly drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)  
*Depth to water table:* About 0 to 10 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* Frequent  
*Calcium carbonate, maximum in profile:* 30 percent  
*Gypsum, maximum in profile:* 5 percent  
*Salinity, maximum in profile:* Moderately saline to strongly saline (10.0 to 33.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 100.0  
*Available water storage in profile:* Moderate (about 7.1 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 7w  
*Hydrologic Soil Group:* C/D  
*Ecological site:* Lakeshore Marsh (R028AY025UT)  
*Hydric soil rating:* Yes

## Description of Eimarsh

### Setting

*Landform:* Lake plains  
*Landform position (three-dimensional):* Talf, rise  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear

### Typical profile

*H1 - 0 to 5 inches:* silty clay loam  
*H2 - 5 to 15 inches:* silty clay  
*H3 - 15 to 60 inches:* silty clay

### Properties and qualities

*Slope:* 0 to 1 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Poorly drained  
*Runoff class:* Medium

## Custom Soil Resource Report

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 10 to 20 inches

*Frequency of flooding:* None

*Frequency of ponding:* Frequent

*Calcium carbonate, maximum in profile:* 30 percent

*Gypsum, maximum in profile:* 10 percent

*Salinity, maximum in profile:* Strongly saline (30.0 to 80.0 mmhos/cm)

*Sodium adsorption ratio, maximum in profile:* 100.0

*Available water storage in profile:* Very low (about 2.3 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 7w

*Hydrologic Soil Group:* C/D

*Ecological site:* Wet Saline Meadow (Saltgrass) (R028AY024UT)

*Hydric soil rating:* Yes

### Description of Playas

#### Setting

*Landform:* Lake plains

*Landform position (three-dimensional):* Talf, dip

*Down-slope shape:* Linear

*Across-slope shape:* Linear

#### Typical profile

*H1 - 0 to 60 inches:* stratified fine sandy loam to silty clay

#### Properties and qualities

*Slope:* 0 to 1 percent

*Natural drainage class:* Very poorly drained

*Runoff class:* Negligible

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 0 inches

*Frequency of ponding:* Frequent

*Calcium carbonate, maximum in profile:* 40 percent

*Gypsum, maximum in profile:* 2 percent

*Salinity, maximum in profile:* Strongly saline (32.0 to 100.0 mmhos/cm)

*Sodium adsorption ratio, maximum in profile:* 90.0

*Available water storage in profile:* Very low (about 1.2 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 8w

*Hydrologic Soil Group:* D

*Ecological site:* Desert Salty Silt (Iodinebush) (R028AY132UT)

*Hydric soil rating:* Yes

### Minor Components

#### Water

*Percent of map unit:* 5 percent

#### Saltair

*Percent of map unit:* 5 percent

*Landform:* Lake plains

## Custom Soil Resource Report

*Landform position (three-dimensional):* Talf, dip  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Ecological site:* Desert Salty Silt (Iodinebush) (R028AY132UT)  
*Hydric soil rating:* Yes

### **Pogal**

*Percent of map unit:* 5 percent  
*Ecological site:* Upland Alkali Loam (Wyoming Big Sagebrush) (R028AY332UT)

## **PNA—Payson-Warm Springs complex, 0 to 3 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* j557  
*Elevation:* 4,200 to 4,600 feet  
*Mean annual precipitation:* 14 to 18 inches  
*Mean annual air temperature:* 48 to 52 degrees F  
*Frost-free period:* 160 to 180 days  
*Farmland classification:* Not prime farmland

### **Map Unit Composition**

### **Description of Payson**

#### **Setting**

*Landform:* Swales on lake terraces  
*Landform position (three-dimensional):* Tread, talf, dip  
*Down-slope shape:* Concave, linear  
*Across-slope shape:* Concave, linear  
*Parent material:* Lacustrine deposits

#### **Typical profile**

*A21 - 0 to 2 inches:* silt loam  
*A22 - 2 to 4 inches:* silt loam  
*B2T - 4 to 9 inches:* silty clay loam  
*B3CA - 9 to 24 inches:* clay  
*C - 24 to 60 inches:* silt loam

#### **Properties and qualities**

*Slope:* 0 to 3 percent  
*Depth to restrictive feature:* More than 80 inches  
*Natural drainage class:* Somewhat poorly drained  
*Runoff class:* Medium

## Custom Soil Resource Report

*Capacity of the most limiting layer to transmit water (Ksat):* Low to moderately low  
(0.01 to 0.06 in/hr)

*Depth to water table:* About 30 to 48 inches

*Frequency of flooding:* Rare

*Frequency of ponding:* None

*Calcium carbonate, maximum in profile:* 40 percent

*Salinity, maximum in profile:* Slightly saline to strongly saline (4.0 to 16.0  
mmhos/cm)

*Sodium adsorption ratio, maximum in profile:* 60.0

*Available water storage in profile:* High (about 9.1 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 7w

*Hydrologic Soil Group:* D

*Ecological site:* Alkali Bottom (Alkali Sacaton) (R028AY001UT)

*Hydric soil rating:* No

## Description of Warm Springs, Deep Over Clay

### Setting

*Landform:* Knolls on lake terraces

*Landform position (three-dimensional):* Tread

*Down-slope shape:* Linear, convex

*Across-slope shape:* Linear, convex

*Parent material:* Lacustrine deposits

### Typical profile

*H1 - 0 to 8 inches:* fine sandy loam

*H2 - 8 to 15 inches:* fine sandy loam

*H3 - 15 to 24 inches:* fine sandy loam

*H4 - 24 to 37 inches:* fine sandy loam

*H5 - 37 to 60 inches:* clay

### Properties and qualities

*Slope:* 0 to 1 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Somewhat poorly drained

*Runoff class:* Medium

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to  
moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 30 to 48 inches

*Hydric soil rating: No*

## So—Syracuse loamy fine sand, 0 to 2 percent slopes

### Map Unit Setting

*National map unit symbol: j56d*  
*Elevation: 4,200 to 4,600 feet*  
*Mean annual precipitation: 14 to 18 inches*  
*Mean annual air temperature: 48 to 52 degrees F*  
*Frost-free period: 160 to 180 days*  
*Farmland classification: Not prime farmland*

### Map Unit Composition

*Syracuse and similar soils: 95 percent*  
*Minor components: 5 percent*  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Syracuse

#### Setting

*Landform: Lake terraces*  
*Landform position (three-dimensional): Tread*  
*Down-slope shape: Linear*  
*Across-slope shape: Linear*  
*Parent material: Alluvium and/or lacustrine deposits*

#### Typical profile

*A1 - 0 to 11 inches: loamy fine sand*  
*AC - 11 to 21 inches: sandy loam*

## Custom Soil Resource Report

*C1ca - 21 to 30 inches:* sandy loam

*C2ca - 30 to 60 inches:* sandy loam

### Properties and qualities

*Slope:* 0 to 2 percent

*Depth to restrictive feature:* More than 80 inches

*Natural drainage class:* Somewhat poorly drained

*Runoff class:* Very low

*Capacity of the most limiting layer to transmit water (Ksat):* High (2.00 to 6.00 in/hr)

*Depth to water table:* About 36 to 48 inches

*Frequency of flooding:* None

*Frequency of ponding:* None

*Calcium carbonate, maximum in profile:* 30 percent

*Salinity, maximum in profile:* Very slightly saline to moderately saline (2.0 to 8.0 mmhos/cm)

*Sodium adsorption ratio, maximum in profile:* 30.0

*Available water storage in profile:* Low (about 5.9 inches)

### Interpretive groups

*Land capability classification (irrigated):* 3w

*Land capability classification (nonirrigated):* 7w

*Hydrologic Soil Group:* A

*Ecological site:* Semiwet Fresh Meadow (R028AY012UT)

*Hydric soil rating:* No

### Minor Components

#### Alkaline soils

*Percent of map unit:* 5 percent

*Landform:* Depressions

*Landform position (three-dimensional):* Dip

*Down-slope shape:* Concave

*Across-slope shape:* Concave

*Hydric soil rating:* Yes

## SPL—Saltair-Playas-Lasil complex, 0 to 1 percent slopes

### Map Unit Setting

*National map unit symbol:* 1qr5z

*Elevation:* 4,190 to 4,290 feet

*Mean annual precipitation:* 12 to 16 inches

*Mean annual air temperature:* 48 to 52 degrees F

*Frost-free period:* 140 to 160 days

*Farmland classification:* Not prime farmland

### Map Unit Composition

*Saltair and similar soils:* 40 percent

*Playas:* 35 percent

*Lasil and similar soils:* 20 percent

## Custom Soil Resource Report

*Minor components: 5 percent*

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Saltair

#### Setting

*Landform: Lake plains*

*Landform position (three-dimensional): Talf, dip*

*Down-slope shape: Linear*

*Across-slope shape: Linear*

*Parent material: Lacustrine deposits derived from mixed sources*

#### Typical profile

*H1 - 0 to 7 inches: silty clay loam*

*H2 - 7 to 20 inches: silty clay loam*

*H3 - 20 to 30 inches: silt loam*

*H4 - 30 to 60 inches: silty clay loam*

#### Properties and qualities

*Slope: 0 to 1 percent*

*Depth to restrictive feature: More than 80 inches*

*Natural drainage class: Poorly drained*

*Runoff class: Negligible*

*Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)*

*Depth to water table: About 10 to 20 inches*

*Frequency of flooding: None*

*Frequency of ponding: Occasional*

*Calcium carbonate, maximum in profile: 40 percent*

*Salinity, maximum in profile: Strongly saline (100.0 to 250.0 mmhos/cm)*

*Sodium adsorption ratio, maximum in profile: 1,000.0*

*Available water storage in profile: Low (about 4.2 inches)*

#### Interpretive groups

*Land capability classification (irrigated): None specified*

*Land capability classification (nonirrigated): 8w*

*Hydrologic Soil Group: C/D*

*Ecological site: Desert Salty Silt (Iodinebush) (R028AY132UT)*

*Hydric soil rating: Yes*

### Description of Playas

#### Setting

*Landform: Lake plains*

*Landform position (three-dimensional): Talf, dip*

*Down-slope shape: Linear*

*Across-slope shape: Linear*

#### Typical profile

*H1 - 0 to 60 inches: stratified fine sandy loam to silty clay*

#### Properties and qualities

*Slope: 0 to 1 percent*

*Natural drainage class: Very poorly drained*

*Runoff class: Negligible*

*Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)*

*Depth to water table: About 0 inches*

## Custom Soil Resource Report

*Frequency of ponding:* Frequent  
*Calcium carbonate, maximum in profile:* 40 percent  
*Gypsum, maximum in profile:* 2 percent  
*Salinity, maximum in profile:* Strongly saline (32.0 to 100.0 mmhos/cm)  
*Sodium adsorption ratio, maximum in profile:* 90.0  
*Available water storage in profile:* Very low (about 1.2 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

## **Sy—Syracuse loamy fine sand, moderately saline, sodic, 0 to 2 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* j56f

*Elevation:* 4,200 to 4,600 feet

*Mean annual precipitation:* 14 to 18 inches

*Mean annual air temperature:* 48 to 52 degrees F

*Frost-free period:* 160 to 180 days

*Farmland classification:* Not prime farmland

### **Map Unit Composition**

*Syracuse and similar soils:* 95 percent

*Minor components:* 5 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### **Description of Syracuse**

#### **Setting**

*Landform:* Lake terraces

*Landform position (three-dimensional):* Tread

*Down-slope shape:* Linear

*Across-slope shape:* Linear

*Parent material:* Alluvium and/or lacustrine deposits

#### **Typical profile**

*A1 - 0 to 11 inches:* loamy fine sand

*Ac - 11 to 21 inches:* sandy loam

## Custom Soil Resource Report

*C1ca - 21 to 30 inches: sandy loam*

*C2ca - 30 to 60 inches: sandy loam*

### Properties and qualities

*Slope: 0 to 2 percent*

*Depth to restrictive feature: More than 80 inches*

*Natural drainage class: Somewhat poorly drained*

*Runoff class: Low*

*Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)*

*Depth to water table: About 24 to 36 inches*

*Frequency of flooding: Rare*

*Frequency of ponding: None*

*Calcium carbonate, maximum in profile: 30 percent*

*Salinity, maximum in profile: Moderately saline to strongly saline (8.0 to 16.0 mmhos/cm)*

*Sodium adsorption ratio, maximum in profile: 30.0*

*Available water storage in profile: Low (about 4.7 inches)*

### Interpretive groups

*Land capability classification (irrigated): 3w*

*Land capability classification (nonirrigated): 7w*

*Hydrologic Soil Group: C*

*Ecological site: Alkali Bottom (Alkali Sacaton) (R028AY001UT)*

*Hydric soil rating: No*

### Minor Components

#### Alkaline soils, fine sandy loam

*Percent of map unit: 5 percent*

*Landform: Depressions*

*Landform position (three-dimensional): Dip*

*Down-slope shape: Concave*

*Across-slope shape: Concave*

*Hydric soil rating: Yes*

## TbA—Timpanogos loam, 0 to 1 percent slopes

### Map Unit Setting

*National map unit symbol: j56j*

*Elevation: 4,300 to 5,050 feet*

*Mean annual precipitation: 14 to 18 inches*

*Mean annual air temperature: 48 to 52 degrees F*

*Frost-free period: 160 to 180 days*

*Farmland classification: Prime farmland if irrigated*

### Map Unit Composition

*Timpanogos and similar soils: 95 percent*

*Minor components: 5 percent*

### Minor Components

#### Poorly drained soils, hydric, not correlated

*Percent of map unit:* 5 percent

*Landform:* Flood plains

*Landform position (three-dimensional):* Talf, dip

*Down-slope shape:* Linear

*Across-slope shape:* Concave

*Hydric soil rating:* Yes
